intellectual history and the identity of john dee in april 1995 at birkbeck college university of london an interdisciplinary colloquium was held so that scholars from diverse fields and areas of expertise could 1 exchange views on the life and work of john dee working in a variety of fields intellectual history history of navigation history of medicine history of science history of mathematics bibliography and manuscript studies we had all been drawn to dee by particular aspects of his work and participating in the colloquium was to c front other narratives about dee s career an experience which was both bewildering and instructive perhaps more than any other intellectual figure of the english renaissance dee has been fragmented and dispersed

across numerous disciplines and the various attempts to re integrate his multiplied image by reference to a particular world view or philosophical outlook have failed to bring him into focus this volume records the diversity of scholarly approaches to john dee which have emerged since the synthetic accounts of i r f calder frances yates and peter french if these approaches have not succeeded in resolving the problematic multiplicity of dee s activities they will at least deepen our understanding of specific and local areas of his intellectual life and render them more historiographically legible

this accessible and illuminating book explores the classical opposition between magic science and religion

this fascinating study looks at how the seemingly incompatible forces of science magic and religion came together in the 15th 16th and 17th centuries to form the foundations of modern culture as religion magic and science in early modern europe and america makes clear the early modern period was one of stark contrasts witch burnings and the brilliant mathematical physics of isaac newton john locke s plea for tolerance and the palpable lack of it the richness of intellectual and artistic life and the poverty of material existence for all but a tiny percentage of the population yet for all the poverty insecurity and superstition the period produced a stunning galaxy of writers artists philosophers and scientists this book looks at the conditions that fomented the emergence of such outstanding talent innovation and invention in the period 1450 to 1800 it examines the interaction between religion magic and science during that time the impossibility of clearly differentiating between the three and the impact of these forces on the geniuses who laid the foundation for modern science and culture
