information operations have always been a part of warfare however this aspect of warfare is having ever greater importance as forces rely more and more on information as an enabler modern information systems make possible very rapid creation distribution and utilization of information these same systems have vulnerabilities that can be exploited by enemy forces information force on force is important and complex new tools and procedures are needed for this warfare arena as these tools are developed it will be necessary to provide education and training into their use this project combines research to develop capabilities combined with concurrent development of instruction materials

this book is a compilation of research accomplishments in the fields of modeling simulation and their applications as presented at asiasim 2011 asia simulation conference 2011 the conference held in seoul korea november 16 18 was organized by asiasim federation of asian simulation societies kss korea society for simulation cass chinese association for system simulation and jsst japan society for simulation technology asiasim 2011 provided a forum for scientists academicians and professionals from the asia pacific region and other parts of the world to share their latest exciting research findings in modeling and simulation methodologies techniques and their tools and applications in military communication network industry and general engineering problems

the primary goal of this book is to assist the student to develop the skills necessary to effectively employ the ideas of mathematics to solve military problems at the simplest level i seek to promote an understanding of why mathematics is useful as a language for characterizing the interaction and relationships among quantifiable concepts or in mathematical terms variables the text explores models of terrorism attrition search detection missile defense radar and operational reliability throughout the text i emphasize the notion of added value and why it is the driving force behind military mathematical modeling for a given mathematical model to be deemed a success something must be learned that was not obvious without the modeling procedure very often added value comes in the form of a prediction in the absence of added value the modeling procedure becomes an exercise not unrelated to digging a ditch simply to fill it back up again

e collaboration in modern organizations initiating and managing distributed projects combines comprehensive research related to e collaboration in modern organizations emphasizing topics relevant to those involved in initiating and managing distributed projects providing authoritative content to scholars researchers and practitioners this book specifically describes conceptual and theoretical issues that have implications for distributed project management implications surrounding the use of e collaborative environments for distributed projects and emerging issues and debate related directly and indirectly to e collaboration support for distributed project management

this book contains the proceedings of an international symposium devoted to

modeling and analysis of defense processes in the context of land air warfare it was sponsored by panel vii on defense applications of operational research of nato s defense research group drg and took place 27 29 july 1982 at nato headquarters in brussels except perhaps for the theater level gaming and analysis workshop sponsored by the office of united 1 states naval research in 1977 this symposium was the first international scientific meeting on operations research systems analysis in the area of land air war fare since the conference on modeling land battle systems 2 for military planning sponsored by nato s special pro gramme panel on systems science in 1974 that conference dealt primarily with modeling small unit company bat talion engagements and to a lesser extent large unit corps theater campaigns with principal emphasis on attrition processes and movement in combat it was considered as rather successful in that it revealed the state of the art around 1972 and identified problem areas and promising approaches for future developments lwith regard to foreign attendance this wo shop was largely limited to participants from the united kingdom and the federal republic of germany see 1 j low theater level gaming and analysis workshop for force planning vol ii summary discus sion of issues and requirements for research sri report may 1981

an examination of analysis and analysis practices for defense planning the paper1s purpose is to delineate priorities for the way ahead i e for investments and other actions to ensure that future models and simulations will serve the needs of decisionmakers the analysis in question is accomplished for quadrennial reviews and for continuing work on capability assessments requirements analysis and program analysis

a collection of papers that explore of the use of modeling in military planning explores how modeling applies to a variety forms of military engagement including ground sea air and nuclear warfare

the presentation was short course on modeling simulation and gaming of warfare presented at georgia institute of technology on august 23 1988 this presentation is an introduction to the analytical modeling of warfare the emphasis is on the lanchester attrition equations the presentation is divided into three parts a section on definitions and back ground a section with examples on game theory and a final section on combat models the last section is the bulk of the presentation the middle section on game theory is brief mostly because of the technical complexity of the material and the specialized nature of its application in the area of warfare modeling it is included for completeness the first section is intended to provide us with a common set of terms and vocabulary kr
