the fields of integer programming and combinatorial optimization continue to be areas of great vitality with an ever increasing number of publications and journals appearing a classified bibliography thus continues to be necessary and useful today even more so than it did when the project of which this is the fifth volume was started in 1970 in the institut fur okonometrie und operations research of the

consequently such a problem may be solved by enumerating just its feasible 1 ceiling points our heuristic approach is based upon the idea that a feasible 1 ceiling point found relatively near the optimal solution for the lp relaxation is apt to have a high possibly even optimal objective function value having applied this heuristic ceiling point algorithm to 48 test problems taken from literature it appears that searching for such 1 ceiling points usually does provide a very good solution with a moderate amount of computational effort
