due to the fast growth of the and the difficulties in finding desired information efficient and effective information retrieval systems have become more important than ever and the search engine has become an essential tool for many people the ranker a central component in every search engine is responsible for the matching between processed queries and indexed documents because of its central role great attention has been paid to the research and development of ranking technologies in addition ranking is also pivotal for many other information retrieval applications such as collaborative filtering definition ranking question answering multimedia retrieval text summarization and online advertisement leveraging machine learning technologies in the ranking process has led to innovative and more effective ranking models and eventually to a completely new research area called learning to rank liu first gives a comprehensive review of the major approaches to learning to rank for each approach he presents the basic framework with example algorithms and he discusses its advantages and disadvantages he continues with some recent advances in learning to rank that cannot be simply categorized into the three major approaches these include relational ranking query dependent ranking transfer ranking and semisupervised ranking his presentation is completed by several examples that apply these technologies to solve real information retrieval problems and by theoretical discussions on guarantees for ranking performance this book is written for researchers and graduate students in both information retrieval and machine learning they will find here the only comprehensive description of the state of the art in a field that has driven the recent advances in search engine development

this book presents recent advances towards the goal of enabling efficient implementation of machine learning models on resource constrained systems covering different application domains the focus is on presenting interesting and new use cases of applying machine learning to innovative application domains exploring the efficient hardware design of efficient machine learning accelerators memory optimization techniques illustrating model compression and neural architecture search techniques for energy efficient and fast execution on resource constrained hardware platforms and understanding hardware software codesign techniques for achieving even greater energy reliability and performance benefits discusses efficient implementation of machine learning in embedded cps iot and edge computing offers comprehensive coverage of hardware design software design and hardware software co design and co optimization describes real applications to demonstrate how embedded cps iot and edge applications benefit from machine learning

written for undergraduate courses in compensation management and wage and salary administration this text offers a practical exploration of the systems methods and procedures involved in establishing and administering a compensation system within any organization
