many statistical and methodological developments regarding fractal analyses have appeared in the scientific literature since the publication of the seminal texts introducing fractal physiology however the lion s share of more recent work is distributed across many outlets and disciplines including aquatic sciences biology computer science ecology economics geology mathematics medicine neuroscience physics physiology psychology and others the purpose of this special topic is to solicit submissions regarding fractal and nonlinear statistical techniques from experts that span a wide range of disciplines the articles will aggregate extensive cross discipline expertise into comprehensive and broadly applicable resources that will support the application of fractal methods to physiology and related disciplines the articles will be organized with respect to a continuum defined by the characteristics of the empirical measurements a given analysis is intended to confront at one end of the continuum are stochastic techniques directed at assessing scale invariant but stochastic data the next step in the continuum concerns self affine random fractals and methods directed at systems that entail scale invariant or  $1/f$  patterns or related patterns of temporal and spatial fluctuation analyses directed at noisy

deterministic signals correspond to the final stage of the continuum that relates the statistical treatments of nonlinear stochastic and deterministic signals each section will contain introductory articles advanced articles and application articles so readers with any level of expertise with fractal methods will find the special topic accessible and useful example stochastic methods include probability density estimation for the inverse power law the lognormal and related distributions articles describing statistical issues and tools for discriminating different classes of distributions will be included an example issue is distinguishing power law distributions from exponential distributions modeling issues and problems regarding statistical mimicking will be addressed as well the random fractal section will present introductions to several one dimensional monofractal time series analysis introductory articles will be accompanied by advanced articles that will supply comprehensive treatments of all the key fractal time series methods such as dispersion analysis detrended fluctuation analysis power spectral density analysis and wavelet techniques box counting and related techniques will be introduced and described for spatial analyses of two and three dimensional domains as well tutorial articles on the execution and interpretation of multifractal analyses will be solicited there are several standard wavelet based and detrended fluctuation based methods for estimating a multifractal spectrum we hope to include articles that contrast the different methods and compare their statistical performance as well the deterministic methods section will include articles that present methods of phase space reconstruction recurrence analysis and cross recurrence analysis recurrence methods are widely applicable but motivated by signals that contain deterministic patterns nonetheless recent developments such as the analysis of recurrence interval scaling relations suggest applicability to fractal systems several related statistical procedures will be included in this section examples include average mutual information statistics and false nearest neighbor analyses

introduction to mechanism design with computer applications provides an updated approach to undergraduate mechanism design and kinematics courses modules for engineering students the use of web based simulations solid modeling and software such as matlab and excel is employed to link the design process with the latest software tools for the design and analysis of mechanisms and machines while a mechanical engineer might brainstorm with a pencil and sketch pad the final result is developed and communicated through cad and computational visualizations this modern approach to mechanical design processes has not been fully integrated in most books as it is in this new text
