this work presents an efficient solution procedure for the elastohydrodynamic ehd contact problem considering structural dynamics the contact bodies are modeled using reduced finite element models singly diagonal implicit runge kutta sdirk methods are used for adaptive time integration the structural model is coupled with the nonlinear reynolds equation using a monolithic coupling approach finally a reduced order model of the complete nonlinear coupled problem is constructed

this book deals with an old conundrum if god knows what we will choose tomorrow how can we be free to choose otherwise if all our choices are already written is our freedom simply an illusion this book provides a precise analysis of this dilemma using the tools of modern metaphysics and logic of time with a focus on three intertwined concepts god s nature the formal structure of time and the metaphysics time including the relationship between temporal entities and a timeless god the chapters analyse various solutions to the problem of foreknowledge and freedom revealing the advantages and drawbacks of each building on this analysis the authors advance constructive solutions showing under what conditions an entity can be omniscient in the presence of free agents and whether an eternal entity can know the tensed futures of the world the metaphysics of time its topology and the semantics of future tensed sentences are shown to be invaluable topics

in dealing with this issue combining investigations into the metaphysics of time with the discipline of temporal logic this monograph brings about important advancements in the philosophical understanding of an ancient and fascinating problem the answer if any is hidden in the folds of time in the elusive nature of this feature of reality and in the infinite branching of our lives
