introduction to chemical processes principles analysis synthesis enhances student understanding of the connection between the chemistry and the process users will find strong coverage of chemistry gain a solid understanding of what chemical processes do convert raw materials into useful products using energy and other resources and learn about the ways in which chemical engineers make decisions and balance constraints to come up with new processes and products the author presents material and energy balances as tools to achieve a real goal workable economical and safe chemical

processes and products loaded with intriguing pedagogy this text is essential to a student's first course in chemical engineering additional resources intended to guide users are also available as package options such as chemskill builder

introduction to chemical processes principles analysis synthesis is intended for use in an introductory one semester course for students in chemical engineering and related disciplines this title strives to give students a flavor of how chemical processes convert raw materials to useful products and provides students with an appreciation for the ways in which chemical engineers make decisions and balance constraints to come up with new processes and products the new edition of this title is available in connect with smartbook including end of chapter content instructor resources include instructor solutions manual textbook images and sample syllabi

written by engineers for engineers with over 150 international editorial advisory board members this highly lauded resource provides up to the minute information on the chemical processes methods practices products and standards in the chemical and related industries

over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport plants have become larger and are often situated in or close to densely populated areas increased hazard of loss of life or property is continually highlighted with incidents such as flixborough bhopal chernobyl three mile island the phillips 66 incident and piper alpha to name but a few the field of loss prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property this book is a detailed guidebook to defending against these and many other hazards it could without exaggeration be referred to as the bible for the process industries this is the standard reference work for chemical and process engineering safety professionals for years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety an entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead frank lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field sam mannan is professor of chemical engineering at texas a m university and heads the mary kay o connor process safety center at texas a m he received his ms and ph d in chemical engineering from the university of oklahoma and joined the chemical

engineering department at texas a m university as a professor in 1997 he has over 20 years of experience as an engineer working both in industry and academia new detail is added to chapters on fire safety engineering explosion hazards analysis and suppression and new appendices feature more recent disasters the many thousands of references have been updated along with standards and codes of practice issued by authorities in the us uk europe and internationally in addition to all this more regulatory relevance and case studies have been included in this edition written in a clear and concise style loss prevention in the process industries covers traditional areas of personal safety as well as the more technological aspects and thus provides balanced and in depth coverage of the whole field of safety and loss prevention a must have standard reference for chemical and process engineering safety professionals the most complete collection of information on the theory practice design elements equipment and laws that pertain to process safety only single work to provide everything principles practice codes standards data and references needed by those practicing in the field

substantially revising and updating the classic reference in the field this handbook offers a valuable overview and myriad details on current chemical processes products and practices no other source offers as much data on the chemistry engineering economics and infrastructure of the industry the handbook serves a spectrum of individuals from those who are directly involved in the chemical industry to others in related industries and activities it provides not only the underlying science and technology for important industry sectors but also broad coverage of critical supporting topics industrial processes and products can be much enhanced through observing the tenets and applying the methodologies found in chapters on green engineering and chemistry specifically biomass conversion practical catalysis and environmental measurements as well as expanded treatment of safety chemistry plant security and emergency preparedness understanding these factors allows them to be part of the total process and helps achieve optimum results in for example process development review and modification important topics in the energy field namely nuclear coal natural gas and petroleum are covered in individual chapters other new chapters include energy conversion energy storage emerging nanoscience and technology updated sections include more material on biomass conversion as well as three chapters covering biotechnology topics namely industrial biotechnology industrial enzymes and industrial production of therapeutic proteins
