the authors initially planned to write an article describing the origins and developments of the theory of fredholm operators and to present their recollections of this topic we started to read again classical papers and we were sidetracked by the literature concerned with the theory and applications of traces and determinants of infinite matrices and integral operators we were especially impressed by the papers of poincare von koch fredholm hilbert and carleman as well as f riesz s book on infinite systems of linear equations consequently our plans were changed and we decided to write a paper on the history of determinants of infinite matrices and operators during the preparation of our paper we realized that many mathematical questions had to be answered in order to gain a more complete understanding of the subject so we changed our plans again and decided to present the subject in a more advanced form which would satisfy our new requirements this whole process took between four and five years of challenging but enjoyable work this entailed the study of the appropriate relatively recent results of grothendieck ruston pietsch hermann konig and others after the papers ggk1 and ggk2 were published we saw that the written material could serve as the basis of a book
