more than a study of shapes and angles geometry reflects an amalgamation of discoveries over time this book not only provides readers with a comprehensive understanding of geometric shapes axioms and formulas it presents the field's brilliant minds from euclid to wendelin werner and many in between whose works reflect a progression of mathematical thought throughout the centuries and have helped produce the various branches of geometry as they are known today detailed diagrams illustrate various concepts and help make geometry accessible to all

this book introduces advanced undergraduates to riemannian geometry and mathematical general relativity the overall strategy of the book is to explain the concept of curvature via the jacobi equation which through discussion of tidal forces further helps motivate the einstein field equations after addressing concepts in geometry such as metrics covariant differentiation tensor calculus and curvature the book explains the mathematical framework for both special and general relativity relativistic concepts discussed include initial value formulation of the einstein equations stress energy tensor schwarzschild space time adm mass and geodesic incompleteness the concluding chapters of the book introduce the reader to geometric analysis original results of the author and her undergraduate student collaborators illustrate how methods of analysis and differential equations are used in addressing questions from geometry and relativity the book is mostly self contained and the reader is only expected to have a solid foundation in multivariable and vector calculus and linear algebra the material in this book was first developed for the 2013 summer program in geometric analysis at the park city math institute and was recently modified and expanded to reflect the author's experience of teaching mathematical general relativity to advanced undergraduates at lewis clark college

is your child getting lost in the system becoming bored losing his or her natural eagerness to learn if so it may be time to take charge of your child's education by doing it yourself the well trained mind will instruct you step by step on how to give your child an academically rigorous comprehensive education from preschool through high school one that will train him or her to read to think to understand to be well rounded and curious about learning veteran home educators susan wise bauer and jessie wise outline the classical pattern of education called the trivium which organizes learning around the maturing capacity of the child's mind and comprises three stages the elementary school grammar stage when the building blocks of information are absorbed through memorization and rules the middle school logic stage in which the student begins to think more analytically and the high school rhetoric stage where the student learns to write and speak with force and originality using this theory as your model you'll be able to instruct your child whether full time or as a supplement to classroom education in all levels of reading writing history geography mathematics science foreign languages rhetoric logic art and music regardless of your own aptitude in those subjects thousands of parents and teachers have already used the detailed book lists and methods described in the well trained mind to create a truly superior education for the children in their care this extensively revised fourth edition contains completely updated curricula and book lists links to an entirely new set of online resources new material on teaching children with learning challenges cutting edge math and sciences recommendations answers to common questions about home education and advice on practical matters such as standardized testing working with your local school board designing a high school program preparing transcripts and applying to colleges you do have control over what and how your child learns the well trained mind will give you the tools you'll need to teach your child with confidence and success

this textbook is designed for a one or two semester graduate course on riemannian geometry for students who are familiar with topological and differentiable manifolds the second edition has been adapted expanded and aptly retitled from lee's earlier book riemannian manifolds an introduction to curvature numerous exercises and problem sets provide the student with opportunities to practice and develop skills appendices contain a brief review of essential background material while demonstrating the uses of most of the main technical tools needed for a careful study of riemannian manifolds this text focuses on ensuring that the student develops an intimate acquaintance with the geometric meaning of curvature the reasonably broad coverage begins with a treatment of indispensable tools for working with riemannian metrics such as connections and geodesics several topics have been added including an expanded treatment of pseudo riemannianmetrics a more detailed treatment of homogeneous spaces and invariant metrics a completely revamped treatment of comparison theory based on riccati equations and a handful of new local to global theorems to name just a few highlights reviews of the first edition arguments and proofs are written down precisely and clearly the expertise of the author is reflected in many valuable comments and remarks on the recent developments of the subjects serious readers would have the challenges of solving the exercises and problems the book is probably one of the most easily accessible introductions to riemannian geometry m c leung mathreview the book's aim is to develop tools and intuition for studying the central unifying theme in riemannian geometry which is the notion of curvature and its relation with topology the main ideas of the subject motivated as in the original papers are introduced here in an intuitive and accessible way the book is an excellent introduction designed for a one semester graduate course containing exercises and problems which encourage students to practice working with the new notions and develop skills for later use by citing suitable references for detailed study the reader is stimulated to inquire into further research c l bejan zbmath

how modern architectural language was invented to communicate with the divine challenging a common narrative of european architectural history the architectural drawing might seem to be a quintessentially modern form and indeed many histories of the genre begin in the early modern period with italian renaissance architects such as alberti yet the middle ages also had a remarkably sophisticated way of drawing and writing about architecture god's own language takes us to twelfth century paris where a scottish monk named richard of saint victor along with his mentor hugh developed an innovative visual and textual architectural language in the process he devised techniques

and terms that we still use today from sectional elevations to the word plan surprisingly however richard s detailed drawings appeared not in an architectural treatise but in a widely circulated set of biblical commentaries seeing architecture as a way of communicating with the divine richard drew plans and elevations for such biblical constructions as noah s ark and the temple envisioned by the prophet ezekiel interpreting richard and hugh s drawings and writings within the context of the thriving theological and intellectual cultures of medieval paris karl kinsella argues that the popularity of these works suggests that centuries before the renaissance there was a large circle of readers with a highly developed understanding of geometry and the visual language of architecture
