this comprehensive textbook covers both classical and geometric aspects of optimization using methods deterministic and stochastic in a single volume and in a language accessible to non mathematicians it will help serve as an ideal study material for senior undergraduate and graduate students in the fields of civil mechanical aerospace electrical electronics

and communication engineering the book includes derivative based methods of optimization direct search methods of optimization basics of riemannian differential geometry geometric methods of optimization using riemannian langevin dynamics stochastic analysis on manifolds and geometric optimization methods this textbook comprehensively treats both classical and geometric optimization methods including deterministic and stochastic monte carlo schemes it offers an extensive coverage of important topics including derivative based methods penalty function methods method of gradient projection evolutionary methods geometric search using riemannian langevin dynamics and stochastic dynamics on manifolds the textbook is accompanied by online resources including matlab codes which are uploaded on our website the textbook is primarily written for senior undergraduate and graduate students in all applied science and engineering disciplines and can be used as a main or supplementary text for courses on classical and geometric optimization

how the built environment understood as spatial capital governs both everyday life in cities and urban systems more generally in an age of social and environmental crises we need to critically rethink the role of the built environment and how best to put it to work measures and meanings of spatial capital presents a new theory of spatial capital arguing that spatial form is essential for building resilience into highly complex urban systems lars marcus argues that the built environment constitutes a form of capital that enhances other forms of capital in cities such as social economic and ecological capital if designed with those goals in mind this represents an important and necessary shift in how we approach urban space in the numerous studies of cities that are conducted in a range of disciplines today such as urban sociology urban economics and urban ecology in contemporary urban studies land has oddly lost its position alongside labor and capital as one of the three fundamental production factors in economic theory but as marcus shows misconceptions of land are at the root of social and environmental crises worldwide by defining the challenges and modeling our use of spatial form to enhance improve land and then synthesizing data into a unified theory of spatial capital marcus provides a crucial reframing of how we can best plan and design our cities for the global challenges we are facing

this series deals with the worldwide economic effects of automation on manufacturing processes robotics and manufacturing is an exhaustive source of scientific and technical progress by top international researchers its contents are invaluable for tracking the trends and directions of this important field unrivaled in its complete and far ranging coverage these volumes are packed with the highest quality research covering robot kinematics dynamics analysis and design sensing and sensors robot control parallel and redundant robots telerobotics and space applications of robots flexible and mobile robots fuzzy logic applications in robots and manufacturing intelligent systems and intelligent manufacturing design and economics of manufacturing systems

this fifth volume of a comprehensive bibliography lists all available publications on integer programming and combinatorial optimization from autumn 1984 to the end of 1987 the volume compiles and classifies 5867 new publications by 4680 authors under 50 different subject headings the listing covers theory and methods of general integer programming and applications of integer programming this classified bibliography will be an invaluable reference source for mathematicians working in optimization researchers working on integer programming techniques and industrial operations research departments the four earlier volumes were published as lecture notes in economics and mathematical systems vols 128 160 197 and 243

this book is published on the occasion of the emeritus status awarded to professor richard foque ir arch msc his successful career as founder and partner of an architect firm professor in design theory and head of the department of design science has provided opportunities to meet colleagues both at home and abroad

the paper presents an in depth computational comparison of the basic solution algorithms for solving transportation problems the comparison is performed using state of the art computer codes for the dual simplex transportation method the out of kilter method and the primal simplex transportation method often referred to as the row column sum method or modi method in addition these codes are compared against a state of the art large scale lp code ophelie lp the study discloses that the most efficient solution procedure arises by coupling a primal transportation algorithm embodying recently developed methods for accelerating the determination of basis trees and dual evaluators with a version of the row minimum start rule and a modified row first negative evaluator rule the resulting method has been found to be at least 100 times faster than ophelie and 6 times faster than a streamlined version of the share out of kilter code the method s median solution time for solving 1000 x 1000 transportation problems on a cdc 6600 computer is 17 seconds with a range of 14 to 22 seconds author
