a complete basic undergraduate course in modern optics for students in physics technology and engineering the first half deals with classical physical optics the second quantum nature of light solutions

this undergraduate textbook presents thorough coverage of the standard topics of classical optics and optical instrument design it also offers significant details regarding the concepts of modern optics 1969 edition

accessible study provides detailed account of the hamiltonian treatment of aberration theory in geometrical optics many classes of optical systems defined in terms of their symmetries detailed solutions 1970 edition

melding basic and clinical science this reference provides a comprehensive overview of the roles that biophysics photochemistry and computational modeling play in the biomedical applications of fluorescence spectroscopy and imaging penned by pioneering researchers the handbook of biomedical fluorescence discusses fundamental aspects of fluorescence generation in organic molecules within tissue theoretical and experimental views of how light propagation in tissue can be used to interpret fluorescence signals endogenous and exogenous fluorescence agents in medical or basic research studies and radiation transport diffusion theory and the monte carlo method

this volume is a compilation of carefully selected questions at the phd qualifying exam level including many actual questions from columbia university university of chicago mit state university of new york at buffalo princeton university university of wisconsin and the university of california at berkeley over a twenty year period topics covered in this book include geometrical optics quantum optics and wave optics this latest edition has been updated with more problems and solutions bringing the total to over 200 problems the original problems have been modernized and outdated questions removed placing emphasis on those that rely on calculations the problems range from fundamental to advanced in a wide range of topics on optics easily enhancing the student s knowledge through workable exercises simple to solve problems play a useful role as a first check of the student s level of knowledge whereas difficult problems will challenge the student s capacity on finding the solutions
