this volume contains c d broad s cambridge lectures on ethics broad gave a course of lectures on the subject intended primarily for part i of the moral sciences tripos every academic year from 1933 34 up to and including 1952 53 except that he did not lecture on ethics in 1935 36 the course however was frequently revised and the present version is essentially that which he gave in 1952 53 broad always wrote out his lectures fully beforehand and the manuscript on ethics although full of revisions is in a reasonably good state but his handwriting is small and close and in places difficult to decipher i therefore fear that some words may have been misread there was an additional complication in the summer of 1953 broad revised and enlarged two sections of the course namely the section on moore s theory and that on naturalistic theories both sections occur in chapter 4 the

revised version of the section on moore is undoubtedly superior to the earlier version and i have therefore included it but in my opinion this is not true of the new version of the section on naturalistic theories although more comprehensive than the earlier version it is not only repetitive in itself but also repeats sometimes almost verbatim passages which occur elsewhere in the lectures in brief the new version is not fully integrated with the rest of the course

exploring the link between sustainable development goals sdgs and the built environment this erudite companion provides a comprehensive overview and critical examination of key topics and complex research issues structured around the 5ps of the sdgs people planet prosperity peace and partnerships the companion suggests potential routes for the future direction of research within this multidisciplinary field of study
