investment science is designed for the core theoretical finance course in quantitative investment and for those individuals interested in the current state of development in the field what the essential ideas are how they are represented how they are represented how they can be used in actual investment practice and where the field might be headed in the future the coverage is similar to more intuitive texts but goes much farther in terms of mathematical content featuring varying levels of mathematical sophistication throughout the emphasis of the text is on the fundamental principles and how they can be mastered and transformed into solutions of important and interesting investment problems end of the chapter exercises are also included and unlike most books in the field

investment science does not concentrate on institutional detail but instead focuses on methodology

this book provides the mathematical foundations of numerical methods and demonstrates their performance on examples exercises and real life applications this is done using the matlab software environment which allows an easy implementation and testing of the algorithms for any specific class of problems the book is addressed to students in engineering mathematics physics and computer sciences in the second edition of this extremely popular textbook on numerical analysis the readability of pictures tables and program headings has been improved several changes in the chapters on iterative methods and on polynomial approximation have also been

this book presents the description of the state of modern iterative techniques together with systematic analysis the first chapters discuss the classical methods comprehensive chapters are devoted to semi iterative techniques chebyshev methods transformations incomplete decompositions gradient and conjugate gradient methods multi grid methods and domain decomposition techniques including e g the additive and multiplicative schwartz method in contrast to other books all techniques are described algebraically for instance for the domain decomposition method this is a new but helpful approach every technique described is illustrated by a pascal program applicable to a class of model problem

published by the american geophysical union as part of the water science and application series volume 6 during the past four decades computer based mathematical models of watershed hydrology have been widely used for a variety of applications including hydrologic forecasting hydrologic design and water resources management these models are based on general mathematical descriptions of the watershed processes that transform natural forcing e g rainfall over the landscape into response e g runoff in the rivers the user of a watershed hydrology model must specify the model parameters before the model is able to properly simulate the watershed behavior

includes articles as well as notes and other features about mathematics and the profession

arguably many industrial optimization problems are of the multiobjective type the present work after providing a survey of the state of the art in multiobjective optimization gives new insight into this important mathematical field by consequently taking up the viewpoint of differential geometry this approach unprecedented in the literature very naturally results in a generalized homotopy method for multiobjective optimization which is theoretically well founded and numerically efficient the power of the new method is demonstrated by solving two real life problems of industrial optimization the book presents recent results obtained by the author and is aimed at mathematicians scientists students and practitioners interested in optimization and numerical homotopy methods
