no group of wild mammals so universally captures the emotions of people world wide than do wild canids that emotion can be enchantment and fascination but it can also be loathing because the opportunism that is the hallmark of the dog family also leads them into conflict with humans in the developed world at least the fascination with wild canids doubtless stems from people s captivation with domestic dogs everybody feels they are an expert on canids while most people may be familiar with only the better known members of the dog family such as the grey wolf and the red fox there are in fact 36 species of wolves dogs jackals and foxes they attract hugely disproportionate interest from academics conservationists veterinarians wildlife managers and the general public this book brings together in single volume an astonishing synthesis of research done in the last twenty years and is the first truly compendious synthesis on wild canids beginning with a complete account of all 36 canid species there follow six review chapters that emphasise topics most relevant to canid conservation science including evolution and systematics behavioural ecology population genetics diseases conflict control of troublesome species and conservation tools fifteen detailed case studies then delve deeply into the very best species investigations currently available written by all the leading figures in the field much of the material is previously unpublished and will make fascinating reading far beyond the confines of canid specialists these chapters portray the unique attributes of wild canids their fascinating and conflictive relationship with man and suggestions for future research and conservation measures for the canidae while most canid species are widespread and thrive in human dominated landscapes several are in severe jeopardy habitat loss illegal hunting persecution by farmers and disease all imperil dwindling populations a final chapter analyses the requirements of and approaches to practical conservation with lessons that go far beyond the dog family it concentrates particular attention on priorities for the protection of the most threatened canid species including the red wolf african wild dog ethiopian wolf island fox and darwin s fox the wild canids provide examples that will thrill the evolutionary biologists and theoretician enthral the natural historian and

challenge the conservationist and wildlife manager anybody interested in evolutionary and behavioural biology in mammals in the environment or in conservation will find much that is new and enriching in this book

backpacker brings the outdoors straight to the reader's doorstep inspiring and enabling them to go more places and enjoy nature more often the authority on active adventure backpacker is the world's first gps enabled magazine and the only magazine whose editors personally test the hiking trails camping gear and survival tips they publish backpacker's editors choice awards an industry honor recognizing design feature and product innovation has become the gold standard against which all other outdoor industry awards are measured

messages from islands is a synthetic tour of the world of biodiversity species and their communities and the habitats in which they live it looks at how biodiversity is generated in the course of evolution and how it is maintained over time the itinerary of the tour is question based what is causing the current biodiversity crisis what is extinction threshold and what is extinction debt what is the biodiversity hypothesis about rapidly increasing allergies asthma and other chronic inflammatory disorders what is the third of third rule and could it be the solution to habitat conservation each chapter begins on an island with reflections of his own studies and observations about biodiversity on islands from a small islet in the baltic sea to the large tropical islands of borneo and madagascar to greenland the world's largest island and then steeped in those locations he leads readers on tours of different themes in biodiversity research greenland for example is a starting point for the world of microbes and how scientists are coming to understand their staggering biodiversity and how it impacts ecosystems including the one that lives within our own guts the result is a conceptually oriented narrative of research on biodiversity infused with personal anecdotes to convey the excitement of doing aforementioned research the book is an important introduction to current themes in ecological research to students and is a highly engaging read for specialists many of whom in ecology have been influenced by mr hanski's work
