 english abstract this thesis examines optimized portfolios of three investor types
 during four different time intervals ranging from 1998 to 2013 to determine if the
 inclusion of treasury inflation protected securities tips has benefits for institutional
 investors such as pension plans university endowments foundations and sovereign
 wealth funds the three investor types used in this study differ in their risk tolerance
 with the more risk averse investor type choosing not to include certain asset classes
 in his investment portfolio the efficient frontier algorithm developed by prof harry

markowitz is used to determine whether the inclusion of tips improves the risk return profile of the portfolio sharpe ratio developed by prof william sharpe is used to measure a portfolio s risk adjusted performance the study found that the benefits of the inclusion of tips in a portfolio vary by time period and investor type while all investors were able to improve their risk return profile the more risk averse investor type benefits to a larger degree from the inclusion of tips furthermore a significant increase in the financial efficiency was only observed in the 1998 to 2002 period therefore the researcher concludes that the tips market is quite dynamic and investors need to take into account forward looking information to profit from the inclusion of tips in investment portfolios

seminar paper from the year 2014 in the subject economics micro economics grade 1 0 university of heidelberg alfred weber institut für wirtschaftswissenschaften course empirical political economy language english abstract recent political alarm signals make lobbying as a research field highly relevant the main objective is to challenge common approaches to model the mechanisms of how lobbyists gain political influence i will explain what parameters or factors makes lobbyists more successful in their aim to influence political decision makers and what channels they use to do so this issue is closely related to the question of what makes incumbents prone to lobbyists activities this paper starts with a short theoretical introduction to rent seeking games which are the theoretical underpinning of a school of thought which models lobbying as a kind of political investment through well aimed campaign contributions i question the conjecture that financial contributions are the main leverage for lobbyists to gain political influence and provide empirical data which support my claim my analysis focuses on the total amount of money which is transferred from u s interest groups to u s politics and could be understood as political investment through campaign financing to explain my findings in this context the question is addressed whether political donations do have a measurable effect on political decisions in the second part of the paper another popular interpretation

of a lobbyist's main instrument to influence is discussed the provision of special knowledge empirical analysis shows that the data delivers strong evidence to reject this idea instead I develop a new way of interpreting the meaning of special knowledge by asking what advantage a politician has to socialise with lobbyists by focusing this question in more detail a theoretical model is introduced which shows how important the concerns of special interest groups could be for politicians in their aim to become reelected this model leads to the final result of this paper what makes lobbyists useful to politicians and therewith powerful is the provision of private information about preferences of possibly pivotal constituents

seminar paper from the year 2020 in the subject politics region south asia grade 1 3 university of heidelberg language english abstract this paper addresses a theoretical and an empirical question first the paper argues that general theories of comparative analysis of political systems can indeed be used to study the special case of north korea this addresses the question of how to conduct research on the hermit kingdom by using an established framework deductively the paper proposes a way to conduct research on north korea amid a lack of reliable data north korea is thereby seen as an extreme case of an autocracy in order that however enables researchers to observe special structural features more explicitly than in autocracies the implicit argument here is that north korea is comparable to other autocracies and only varies in the strength of certain characteristics such as regime type or internal dynamics second the paper investigates empirically whether autocracies use foreign policy for internal legitimation and if so what strategies are they pursuing this paper argues that autocrats can basically use four strategies to use foreign policy as a source of legitimation making use of a framework developed by kneuer the case of north korea is examined to illustrate the argument a within case analysis is used to investigate the extent to which each of the three kims used foreign policy as a means of generating legitimation the results suggest that all three used similar strategies but depending on their respective legitimation deficits overall it is advocated to take a closer look at the influence of foreign policy on domestic dynamics this has so far been largely neglected this becomes particularly evident when it comes to the question of the possibilities for north korean denuclearization viewed as a domestic

legitimation measures it becomes more questionable whether north korea will abandon its weapons anytime soon
