in the revenge of gaia bestselling author james lovelock father of climate studies
and originator of the influential gaia theory which views the entire earth as a
living meta organism provides a definitive look at our imminent global crisis in

this disturbing new book lovelock guides us toward a hard reality soon we may not be able to alter the oncoming climate crisis lovelock's influential gaia theory one of the building blocks of modern climate science conceives of the earth including the atmosphere oceans biosphere and upper layers of rock as a single living super organism regulating its internal environment much as an animal regulates its body temperature and chemical balance but now says lovelock that organism is sick it is running a fever born of the combination of a sun whose intensity is slowly growing over millions of years and an atmosphere whose greenhouse gases have recently spiked due to human activity earth will adjust to these stresses but on time scales measured in the hundreds of millennia it is already too late lovelock says to prevent the global climate from flipping into an entirely new equilibrium state that will leave the tropics uninhabitable and force migration to the poles the revenge of gaia explains the stress the planetary system is under and how humans are contributing to it what the consequences will be and what humanity must do to rescue itself

james lovelock described his previous book the revenge of gaia as a wake up call for humanity stark though it was in many respects in the vanishing face of gaia lovelock says that even though the weather seems cooler and pollution lessens as the recession bites the environmental problems we will face in the twenty first century are even more terrifying than he previously realised the arctic and antarctic ice caps are melting very quickly and water shortages and natural disasters are more common occurrences than at any time in recent history the civilisations of many countries will be jeopardised and life as we know it severely disrupted almost all predictions of the likely rate of climate change have been based on estimates which professional observers in the real world now show are consistently underestimating the true rate of change as a global community we continue to be fixated by conventional green ideas which we believe will help save our world lovelock argues that only gaia theory which he originated over forty years ago can really help us understand the crisis fully the root problem is that there are too many people and animals for the earth to carry and there is in fact only one possible procedure which might bring a permanent cure for climate change but we are unlikely to adopt it our wish to continue business as

usual will probably prevent us from saving ourselves says Lovelock so we must adapt as best we can and try to ensure that enough of us survive to allow a more capable species to evolve from us there could hardly be a more important message for humankind James Lovelock has been an active and accurate observer of the earth environment since the 1960s and was the first to find CFCs and other gases accumulating in the air his Gaia theory provides insight into climate change in the coming century this is his final warning

this book lays out the principles and practices of transformative sustainability education using a relational way of thinking and being Elizabeth A. Lange advocates for a new approach to environmental and sustainability education that of rethinking the western way of knowing and being and engendering a frank discussion about the societal elements that are generating climate environmental economic and social issues highlighting the importance of indigenous and life giving cultures the book covers educational theory transformation stories of adult learners social and economic critique and visions of changemakers each chapter also has a strong pedagogical element with entry points for learners and embodied practices and examples of taking action at micro meso macro levels woven throughout overall this book enacts a relational approach to transformative sustainability education that draws from post humanist theory process thought relational ontology decolonization theory indigenous philosophy and a spirituality that builds a sense of sacred towards the living world written in an imaginative storytelling manner this book will be a great resource for formal and nonformal environmental and sustainability educators

companion to environmental studies presents a comprehensive and interdisciplinary overview of the key issues debates concepts approaches and questions that together define environmental studies today the intellectually wide ranging volume covers approaches in environmental science all the way through to humanistic and post natural perspectives on the biophysical world though many academic disciplines have incorporated studying the environment as part of their curriculum only in recent years has it become central to the

social sciences and humanities rather than mainly the geosciences the environment is now a keyword in everything from fisheries science to international relations to philosophical ethics to cultural studies the companion brings these subject areas and their distinctive perspectives and contributions together in one accessible volume over 150 short chapters written by leading international experts provide concise authoritative and easy to use summaries of all the major and emerging topics dominating the field while the seven part introductions situate and provide context for section entries a gateway to deeper understanding is provided via further reading and links to online resources companion to environmental studies offers an essential one stop reference to university students academics policy makers and others keenly interested in the environmental question the answer to which will define the coming century

presents a comprehensive guide to the geography of the world with world maps and articles on cartography notable explorers climate and more

religion is universal human culture no phenomenon is more widely shared or more intensely studied yet there is no agreement on what religion is now in faces in the clouds anthropologist stewart guthrie provides a provocative definition of religion in a bold and persuasive new theory guthrie says religion can best be understood as systematic anthropomorphism that is the attribution of human characteristics to nonhuman things and events many writers see anthropomorphism as common or even universal in religion but few think it is central to guthrie however it is fundamental religion he writes consists of seeing the world as humanlike as guthrie shows people find a wide range of humanlike beings plausible gods spirits abominable snowmen hal the computer chiquita banana we find messages in random events such as earthquakes weather and traffic accidents we say a fire rages a storm wreaks vengeance and waters lie still guthrie says that our tendency to find human characteristics in the nonhuman world stems from a deep seated perceptual strategy in the face of pervasive if mostly unconscious uncertainty about what we see we bet on the most meaningful interpretation we can if we are in the woods and see a dark

shape that might be a bear or a boulder for example it is good policy to think it is a bear if we are mistaken we lose little and if we are right we gain much so guthrie writes in scanning the world we always look for what most concerns us livings things and especially human ones even animals watch for human attributes as when birds avoid scarecrows in short we all follow the principle better safe than sorry marshalling a wealth of evidence from anthropology cognitive science philosophy theology advertising literature art and animal behavior guthrie offers a fascinating array of examples to show how this perceptual strategy pervades secular life and how it characterizes religious experience challenging the very foundations of religion faces in the clouds forces us to take a new look at this fundamental element of human life

gaia in which james lovelock puts forward his inspirational and controversial idea that the earth functions as a single organism with life influencing planetary processes to form a self regulating system aiding its own survival is now a classic work that continues to provoke heated scientific debate

this is the perfect self teaching guide for anyone interested in basic earth composition and development of the ever changing nature of our planet the author covers a wide array of topics including atmosphere water global warming atmospheric differentiation geomorphology glaciers erosion carbon dating acid rain and much more it includes real world examples environmental notes tips scientific news and international trends

somewhere beyond tibet lies a paradise of universal wisdom and ineffectual peace known as shambala called by some shangra la this is a mythical kingdom of jewel lakes wish ful filling trees this look behind the myth shows shambala to be a real place always accessible to the pure of heart

for many it was more than a publication it was a way of life the whole earth catalog billed itself as access to tools and it grew from a bay area blip to a national phenomenon catering to hippies do it yourselfers and anyone interested in self sufficiency independent of mainstream america now known as living off the grid in recovering the history of the catalog s unique brand of

environmentalism historian kirk recounts how stewart brand and the point foundation promoted a philosophy of pragmatic environmentalism that celebrated technological achievement human ingenuity and sustainable living kirk shows us that whole earth was more than a mere counterculture fad at a time when many of these ideas were seen as heretical to a predominantly wilderness based movement it became a critical forum for environmental alternatives and a model for how complicated ecological ideas could be presented in a hopeful and even humorous way from publisher description

the originator of the gaia theory argues that the earth is a self regulating superorganism whose balance has been upset by the impact of global warming and that the resulting climate change could have dire results for human civilization

environmental literature an encyclopedia of works authors and themes examines the works of explorers scientists environmentalists ecologists conservationists and nature writers as well as novelists and poets each entry includes end of entry references and cross references to relevant works a bibliography and comprehensive index round out this handy encyclopedia book jacket

living with the planet takes readers a step back from their daily lives to remind them of their global interconnectedness beginning with an overview of the earth its atmosphere and oceans catherine von ruhland next takes a detailed look at each continent covering pertinent issues such as global warming deforestation resource exploitation and threatened wildlife a taking action section at the end of each chapter offers a wealth of suggestions for what we can do to make a positive difference complete with color illustrations throughout this book is a vital resource for anyone who wants to learn more about the state of our world the already visible effects of climate change and what we can do for the good of the planet
