excerpt from high school algebra this text covers the work prescribed for entrance to the universities and normal schools the book is written from the standpoint of the pupil and in such a form that he will be able to understand it with a minimum of assistance from the teacher the question method is frequently used in developing the theory the purpose of this is to lead the pupil to think for himself the close connection between

algebra and arithmetic is constantly kept in view and in many cases the arithmetical and algebraic processes are shown in parallel columns there are numerous diagrams for the purpose of illustrating the theory and algebraic methods are applied to many of the theorems which the pupil meets in elementary geometry special emphasis is placed upon the verification of results in the past sufficient attention has not been given to this important part of mathematical work provision is made for oral work many of the exercises being introduced by a number of oral examples for use in class the equation and the solution of simple problems are introduced in the second chapter it is hoped that the pupil will thus become interested much earlier in the work long multiplications and divisions are not included in the work of the first year they are difficult for the beginner and of little interest as there is not much to offer in the way of practical illustrations about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from high school algebra elementary course in writing the first principles of algebra the authors have had constantly before them two chief aims 1 to provide a gradual and natural introduction to the symbols and processes of algebra 2 to give vital purpose to the study of algebra by using it to do interesting and valuable things each of these aims leads to the same order of topics which however differs somewhat from the conventional order if it is admitted that there should be a gradually increasing complexity of forms to be manipulated it follows that factoring and complicated work in fractions have no proper place in the first half year this book is arranged so that factoring may begin with the second semester and complicated fractions may come still later simple fractions are treated in chapter v the pupil is introduced to the algebraic notation by recalling and stating in terms of letters certain rules of arithmetic with which he is already familiar the simplicity of the algebraic formulas compared with the arithmetical statement of rules known to the pupil cannot fail to impress him with the usefulness and power of the subject which he is about to study this impression will be deepened when in chapter vi rules which caused considerable trouble in arithmetic are derived with the utmost ease by algebraic processes the study of equations and their uses is naturally the main topic of the elementary course this topic is therefore developed early simple simultaneous equations being completed in part one which is
