there are many books on computers networks and software engineering but none that integrate the three with applications integration is

important because increasingly software dominates the performance reliability maintainability and availability of complex computer and systems books on software engineering typically portray software as if it exists in a vacuum with no relationship to the wider system this is wrong because a system is more than software it is comprised of people organizations processes hardware and software all of these components must be considered in an integrative fashion when designing systems on the other hand books on computers and networks do not demonstrate a deep understanding of the intricacies of developing software in this book you will learn for example how to quantitatively analyze the performance reliability maintainability and availability of computers networks and software in relation to the total system furthermore you will learn how to evaluate and mitigate the risk of deploying integrated systems you will learn how to apply many models dealing with the optimization of systems numerous quantitative examples are provided to help you understand and interpret model results this book can be used as a first year graduate course in computer network and software engineering as an on the job reference for computer network and software engineers and as a reference for these disciplines

the aerodynamic characteristics of airfoils with several flap configurations have been studied theoretically and experimentally in an environment that simulates a wing immersed in the downwash of a hovering rotor special techniques have been developed for correcting and validating the wind tunnel data for large blockage effects and the test results have been used to evaluate two modern computational aerodynamics codes the combined computed and measured results show that improved flap and leading edge configurations can be designed which will achieve large reductions in the downloads of tilt rotor aircraft and thereby improve their hover efficiency author
