Student's Solutions Manual for Multivariable Calculus

This book of problems and solutions is a natural continuation of Ilie and Schrecengost's first book, *Electromagnetism: Problems and Solutions*. As with the first book, this book is written for junior or senior undergraduate students and for graduate students who may have not studied electrodynamics yet and who may want to work on more problems and have an immediate feedback while studying. This book of problems and solutions is a companion for the student who would like to work independently on more electrodynamics problems in order to deepen their understanding and problem-solving skills and perhaps prepare for graduate school. This book discusses main concepts and techniques related to Maxwell's equations, conservation laws, electromagnetic waves, potentials and fields, and radiation.
