cucurbiturils cbs are a young family of molecular containers able to form stable complexes with various guests including drug molecules amino acids and peptides

saccharides dyes hydrocarbons perfluorinated hydrocarbons and proteins since the discovery of the first cb the field has seen tremendous growth with respect to the synthesis of new homologues and derivatives the discovery of record binding affinities of guest molecules in their hydrophobic cavity and associated applications ranging from sensing to drug delivery cucurbiturils and related macrocycles provides a complete overview of cb chemistry covering the fundamental aspects including its history synthesis host guest chemistry and the thermodynamic basis thereof the book will tackle specialist topics such as redox chemistry of cb complexes and cbs in the gas phase and will address the recent trends of the application of cbs in other fields including biology and materials edited by a pioneer of cucurbituril chemistry and with contributions from global experts this title will appeal to students and researchers working in supramolecular chemistry materials chemistry nanotechnology organic chemistry biochemistry and chemical biology

applications of nuclear magnetic resonance span a wide range of scientific disciplines from physics to medicine this series has provided an essential digest of the nmr literature for more than four decades and each volume provides unrivalled coverage of the literature on this topic continuous coverage on some topics such as theoretical and physical aspects of nuclear shielding is balanced by the desire for coverage on newer topics like applications in biological systems and materials science for those wanting to become rapidly acquainted with nmr or seasoned practitioners this is an invaluable source of current methods and applications

polymeric materials form the basis of daily life despite the great contribution of traditional methodologies such as anionic and radical polymerizations in preparing various functional polymers the increasing demand for polymers with new structures and functions has inspired the development of new synthetic techniques many new polymerizations including click polymerization controlled living radical polymerization multicomponent polymerization have been well developed focusing on breakthroughs and recent progress synthetic polymer chemistry provides efficient tools for the synthesis of linear and topological polymers chapters cover topics including fabrication of supramolecular polymers organocatalytic synthesis and olefin co polymerization this title will be a valuable reference for those working in polymer chemistry as well as students and researchers interested in opto electronic biological and materials sciences

the handbook of homotopy theory provides a panoramic view of an active area in mathematics that is currently seeing dramatic solutions to long standing open problems and is proving itself of increasing importance across many other mathematical disciplines the origins of the subject date back to work of henri poincaré and heinz hopf in the early 20th century but it has seen enormous progress in the 21st century a highlight of this volume is an introduction to and diverse applications of the newly established foundational theory of categories the coverage is vast ranging from axiomatic to applied from foundational to computational and includes surveys of applications both geometric and algebraic the contributors are among the most active and creative researchers in the field the 22 chapters by 31 contributors are designed to address novices as well as established mathematicians interested in learning the state of the art in this field whose methods are of increasing importance in many other areas

how do capitalist institutions vary across countries and regions how is capitalist diversity related to political and social factors like inequality representation and political systems how do capitalist institutions shape economic outcomes comparative capitalism takes a global approach to capitalist diversity it considers not only liberal and coordinated market economies in the global north but also other varieties such as networked hierarchical dependent and statist market economies in other parts of the world it examines new models such as growth regimes and growth models and key trends such as the growing significance of finance and the rise of populism in the 21st century case studies are drawn from both the global north and south including east central europe east asia latin america and the brics economies to highlight both domestic institutions and the role of economic integration on a global scale including tables and overviews of key features of each model comparative capitalism is essential reading for students of international and

comparative political economy international development and business government relations
