the quality and testing of materials used in construction are covered by reference to the appropriate astm standard specifications welding of

reinforcement is covered by reference to the appropriate AWS standard. Uses of the code include adoption by reference in general building codes and earlier editions have been widely used in this manner. The code is written in a format that allows such reference without change to its language. Therefore, background details or suggestions for carrying out the requirements or intent of the code portion cannot be included. The commentary is provided for this purpose. Some of the considerations of the committee in developing the code portion are discussed within the commentary with emphasis given to the explanation of new or revised provisions. Much of the research data referenced in preparing the code is cited for the user desiring to study individual questions in greater detail. Other documents that provide suggestions for carrying out the requirements of the code are also cited.

This manual should serve a twofold purpose: 1. to delineate as precisely as possible the industry standards and practices for reinforcing steel; 2. to provide a convenient reference source for the architect, the engineer, the inspector, the detailer, and the fabricator.

Fiber-reinforced polymer (FRP) composites have become an integral part of the construction industry because of their versatility, enhanced durability, and resistance to fatigue and corrosion.
