this volume is primarily intended for the undergraduate students of all disciplines of engineering of various Indian universities

this well organised text deals with complex variable analysis contour integration the theorems of cauchy riemann morera maclaurin laurent and many more that help students acquire a solid foundation in the basic skills it also discusses probability theory binomial and poisson distributions variance and time series that make the students comprehend the concepts and problems with ease finally it explains the numerical methods for differentiation and integration numerical solutions to ordinary differential equations using single and multi step numerical methods in an easy to understand style that creates the interest in the subject key features introductions to all chapters to understand the topic more clearly numerous solved examples with illustrations to enhance the skills end of chapter exercises to drill the students in self study objective type questions that sharpen the brain and help in proper understanding of the topic in depth

this book on numerical methods actually this is in continuation to other three volumes of our book text book on engineering mathematics for b e course which cater to the needs of the first and the second year students the present book is to meet the requirements of the students of the fifth semester the need of which was being felt very anxiously in the treatment we have tried to maintain the same style as used in the other three volumes all the topics have been covered comprehensively but with clarity in lucid and easy way to grasp there is a good number of fully solved examples with exercises to be worked out at the end of each chapter

algebra partial fractions the binomial theorem exponential theorem the logarithmic series theory of equations theory of equations reciprocal equations newton rahson method matrices fundamental concepts rank of a matrix linear equations characteristic roots and vectors finite differences finite differences interpolations newton s forward backward interpolation lagrange s interpolation trigonometry expansions hyperbolic functions differential calculus successive derivatives jacobians polar curves etc

the existing third volume of our series of textbooks on engineering mathematics for students of b e b tech b sc applied science has been now split into two volumes to cater to the needs of the syllabus semester wise this volume caters to the syllabus of fourth semester many worked examples are added in each chapter and a large number of problems are included

in the exercises

this periodical edition includes peer reviewed papers based on results of scientific research and engineering solutions in different areas of modern engineering science

special topic volume with invited peer reviewed papers only

engineering mathematics ii

engineering mathematics covers the four mathematics papers that are offered to undergraduate students of engineering with an emphasis on problem solving techniques and engineering applications as well as detailed explanations of the mathematical concepts this book will give the students a complete grasp of the mathematical skills that are needed by engineers
