this volume introduces both theory and applications in detail it includes differential dynamical models of granular shearing dynamical strength characteristics and the excited response of granules subject to vibration the book is a useful reference for both theoretical researchers and engineers in the fields of mining engineering and geotechnical engineering engineers in fields ranging from metallurgy to water conservancy and hydroelectricity will also benefit from the book

this volume examines the theoretical and practical needs on the subject of multibody system dynamics with emphasis on flexible systems and engineering applications It focuses on developing an all purpose algorithm for the dynamic simulation of flexible tree like systems making use of matrix representation at all levels the book covers new theories with engineering applications involved in broad fields which include civil engineering aerospace and robotics as well as general and mechanical engineering the applications include high temperature conditions time variant contact conditions biosystem analysis vibration minimization and control

this book gives an updated and detailed presentation of modern quantum mechanical treatments and practical computational methods for dynamical processes of small molecular systems the main emphasis is on the recent development of successful theories and computational methods for the reactive scattering process specific applications are given in detail for a number of

benchmark chemical reaction systems in the gas phase and gas surface differing from traditional physics books focusing on abstract collision theory for elastic collisions the book has been written in a fashion in which the development of general reactive or rearrangement scattering theory is accompanied by practical applications for realistic reaction systems

modern businesses and organizations understand that corporate social responsibility csr has become an important factor for sustainable success at the same time csr has established itself as a widely accepted element of courses in managerial training and education this book designed to support csr teaching collects 14 essays that clearly illustrate and explain the benefits and challenges of socially responsible corporate policies aligning theory and practice the book focuses on four central themes management environment and sustainability corporate social responsibility and accounting and financial reporting business students and experienced managers alike will find this book a valuable resource that helps them to discover the strong forces that link successful management with corporate social responsibility

this book analyses stochastic dynamic systems across a broad spectrum in economics and finance the major unifying theme is the coherent and rigorous treatment of uncertainty and its implications for describing stochastic processes by the stochastic differential equations of the fundamental models in various fields pertinent subjects are interrelated juxtaposed and examined for consistency in theoretical and empirical contexts the volume consists of three parts developments in stochastic dynamics stochastic dynamics in basic economic growth models intertemporal optimisation in consumption finance and growth key topics include fractional brownian motion in finance moment evolution of gaussian and geometric wiener diffusions stochastic kinematics and stochastic mechanics stochastic growth in continuous time time delays and hopf bifurcation consumption and investment strategies differential

systems in finance and life insurance uncertainty of technological innovations investment and employment cycles stochastic control theory and risk aversion the works collected in this book serves to bridge the old deterministic dynamics and the new stochastic dynamics the collection is important for scholars and advanced graduate students of economics statistics and applied mathematics

sir roy harrod was one of the foremost economists of the twentieth century who made pioneering contributions in several branches of economics including trade cycle theory growth theory trade theory monetary economics imperfect competition theory and methodology this volume arises out of a conference to celebrate the sixtieth anniversary of the publication of his book the trade cycle in 1936 after an introductory essay by walter eltis a student of harrod this volume contains important essays on the interpretation of harrod s work in the field of economic dynamics by danial besomi and maurizio pugno and in the field of trade and growth by tony thirlwall john mcombie and luca bendictis finally warren young in the process of writing harrod s biography uses correspondence between harrod and haberler to elucidate harrod s views on trade theory international monetary reform and inflation
