buku ini berusaha memenuhi kondisi ideal penggunaan statistik dalam penelitian secara menyeluruh dimana seluruh alat uji statistik dan contoh kasus pengujian sedapat mungkin disajikan secara lengkap dan menyeluruh hal inilah yang membuat buku ini memiliki kelebihan selain itu buku ini juga meminimalisir penulisan rumus dan formula matematik sehingga statistik terlihat lebih mudah dan aplikatif

introduces the latest developments in forecasting in advanced quantitative data analysis this book presents advanced univariate multiple regressions which can directly be used to forecast their dependent variables evaluate their in sample forecast values and compute forecast values beyond the sample period various alternative multiple regressions models are presented based on a single time series bivariate and triple time series which are developed by taking into account specific growth patterns of each dependent variables starting with the simplest model up to the most advanced model graphs of the observed scores and the forecast evaluation of each of the models are offered to show the worst and the best forecast models among each set of the models of a specific independent variable advanced time series data analysis forecasting using eviews provides readers with a number of modern advanced forecast models not featured in any other book they include various interaction models models with alternative trends including the models with heterogeneous trends and complete heterogeneous models for monthly time series quarterly time series and annually time series each of the models can be applied by all quantitative researchers presents models that are all classroom tested contains real life data samples contains over 350 equation specifications of various time series models contains over 200 illustrative examples with special notes and comments applicable for time series data of all

quantitative studies advanced time series data analysis forecasting using eviews will appeal to researchers and practitioners in forecasting models as well as those studying quantitative data analysis it is suitable for those wishing to obtain a better knowledge and understanding on forecasting specifically the uncertainty of forecast values

do you want to recognize the most suitable models for analysis of statistical data sets this book provides a hands on practical guide to using the most suitable models for analysis of statistical data sets using eviews an interactive windows based computer software program for sophisticated data analysis regression and forecasting to define and test statistical hypotheses rich in examples and with an emphasis on how to develop acceptable statistical models time series data analysis using eviews is a perfect complement to theoretical books presenting statistical or econometric models for time series data the procedures introduced are easily extendible to cross section data sets the author provides step by step directions on how to apply eviews software to time series data analysis offers guidance on how to develop and evaluate alternative empirical models permitting the most appropriate to be selected without the need for computational formulae examines a variety of times series models including continuous growth discontinuous growth seemingly causal regression arch and garch as well as a general form of nonlinear time series and nonparametric models gives over 250 illustrative examples and notes based on the author's own empirical findings allowing the advantages and limitations of each model to be understood describes the theory behind the models in comprehensive appendices provides supplementary information and data sets an essential tool for advanced undergraduate and graduate students taking finance or econometrics courses statistics life sciences and social science students as well as applied researchers will also find this book an invaluable resource

a practical guide to selecting and applying the most appropriate model for analysis of cross section data using eviews this book is a reflection of the vast experience and knowledge of the author it is a useful reference for students and practitioners dealing with cross sectional data analysis the strength of the book lies in its wealth of material and well structured guidelines prof yohanes eko riyanto nanyang technological university singapore this is superb and brilliant prof agung has skilfully transformed his best experiences into new knowledge creating a new way of understanding data analysis dr i putu gede ary suta the ary suta center jakarta basic theoretical concepts of statistics as well as sampling methods are often misinterpreted by students and less experienced researchers this book addresses this issue by providing a hands on practical guide to conducting data analysis using eviews combined with a variety of illustrative models and their extensions models having numerically dependent variables based on a cross section data set such as univariate multivariate and nonlinear models as well as non parametric regressions are concentrated on it is shown that a wide variety of hypotheses can easily be tested using eviews cross section and experimental data analysis using eviews provides step by step directions on how to apply eviews to cross section data analysis from multivariate analysis and nonlinear models to non parametric regression presents a method to test for all possible hypotheses based on each model proposes a new method for data analysis based on a multifactorial design model demonstrates that statistical summaries in the form of tabulations are invaluable inputs for strategic decision making contains 200 examples with special notes and comments based on the author's own empirical findings as well as over 400 illustrative outputs of regressions from eviews techniques are illustrated through practical examples from real situations comes with supplementary material including work files containing selected equation and system specifications that have been applied in the book this user friendly introduction to eviews is ideal for advanced undergraduate and graduate students taking finance econometrics population or public policy courses as well as applied policy researchers
