master s thesis from the year 2013 in the subject economics economic cycle and growth grade 1 0 free university of bozen bolzano faculty of economics management language english abstract this thesis analyzes the two economies of south tyrol and luxembourg questioning whether their economic growth can be explained by concepts of endogenous growth theories south tyrol and luxembourg are two quite similar economies in terms of

size population cultural diversity and scarcity of natural resources but yet very different in matters of economic growth income per capita and economic specialization which makes them an interesting sample to test for growth factors since endogenous growth theories in contrast to neoclassical conceptions provide a much broader range of tools to handle endogenous technological change innovation and other factors they are better suited to analyze growth factors therefore this thesis first draws a summary on the evolution of endogenous growth theories including an outline of the most important contributions it is shown that the factor human capital plays a major role in most models subsequently the second part of the thesis deals with the economies of south tyrol and luxembourg in detail evaluates historical economic growth identifies tourism and financial intermediation as their main driving forces and asks whether human capital could be the moving power behind them the method of choice for measuring is the country specific data of the human development index which is issued every year by the united nations they reveal that human capital formation cannot be the answer to the discrepancy between the growth rates of both economies consequently alternative explanations outside endogenous growth theories are sought potential causes could be foreign income growth in the case of south tyrol and dynamic capabilities together with a capacity of attracting human resources in the case of luxembourg
