a step by step guide to delivering high value solutions getting started with sun one covers planning designing configuring integrating and implementing sun one internet infrastructures drawing on his first hand experience supporting sun one customers thurston describes the sun one application server directory server and server and provides expert guidance on building business applications with sun one studio 4 book jacket

what is this book about the results of using j2ee in practice are often disappointing applications are often slow unduly complex and take too long to develop rod johnson believes that the problem lies not in j2ee itself but in that it is often used badly many j2ee publications advocate approaches that while fine in theory often fail in reality or deliver no real business value expert one on one j2ee design and development aims to demystify j2ee development using a practical focus it shows how to use j2ee technologies to reduce rather than increase complexity rod draws on his experience of designing successful high volume j2ee applications and salvaging failing projects as well as intimate knowledge of the j2ee specifications to offer a real world how to guide on how you too can make j2ee work in practice it will help you to solve common problems with j2ee and avoid the expensive mistakes often made in j2ee projects it will guide you through the complexity of the j2ee services and apis to enable you to build the simplest possible solution on time and on budget rod takes a practical pragmatic approach questioning j2ee orthodoxy where it has failed to deliver results in practice and instead suggesting effective proven approaches what does this book cover in this book you will learn when to use a distributed architecture when and how to use ejb how to develop an efficient data access strategy how to design a clean and maintainable web interface how to design j2ee applications for performance who is this book for this book would be of value to most enterprise developers although some of the discussion for example on performance and scalability would be most relevant to architects and lead developers the practical focus would make it useful to anyone with some familiarity with j2ee because of the complete design deployment coverage a less advanced developer could work through the book along with a more introductory text and successfully build and understand the sample application this comprehensive coverage would also be useful to developers in smaller organisations who might be called upon to fill

several normally distinct roles what is special about this book wondering what differentiates this book from others like it in the market take a look it does not just discuss technology but stress its practical application the book is driven from the need to solve common tasks rather than by the elements of j2ee it discuss risks in j2ee development it takes the reader through the entire design development and build process of a non trivial application this wouldn t be compressed into one or two chapters like the java pet store but would be a realistic example comparable to the complexity of applications readers would need to build at each point in the design alternative choices would be discussed this would be important both where there s a real problem with the obvious alternative and where the obvious alternatives are perhaps equally valid it emphasizes the use of oo design and design patterns in j2ee without becoming a theoretical book

engineering modelling and implementing applications presents the state of the art approaches for obtaining a correct and complete software product from conceptual schemas represented via well known design notations describing mature and consolidated approaches to developing complex applications this edited volume is divided into three parts and covers the challenges web application developers face design issues for web applications and how to measure and evaluate web applications in a consistent way with contributions from leading researchers in the field this book will appeal to researchers and students as well as to software engineers software architects and business analysts
