hydraulic design and management of wastewater transport systems is a manual resulting from the
research project capwat capacity loss in wastewater pressure pipelines which researched the
mechanisms for the creation stagnation and discharge of gas bubbles in wastewater pressure
pipelines during this six year research programme it was recognised that there is no hydraulic
manual guideline that focuses on the entire wastewater pressure pipeline system the processes it
includes and the interaction between the pressure pipeline and the pumping station this manual
provides a compilation of all the hydraulic knowledge that is necessary for designing a wastewater
transport system and to manage it operationally the wastewater transport system is the link
between the collection and treatment of the wastewater and the collection system includes among
others the gravity flow sewage system from the house or consumer and service connection
through street and main sewers up to the suction basins the transport system for which this manual
was written includes the suction basin the sewage pumping station and the pressure pipelines

wastewater transport systems are becoming more complex due to building larger sewage water treatment plants wastewater being transported over greater distances and increasingly more and smaller pipelines connecting to the main sewers the operation of the pumping stations is largely determined by how the entire system behaves insight into this operation is therefore crucial for proper design and management the central point of the design is to create an independent and safe system with the necessary transport capacity at minimum societal costs predominantly the management aspect focuses on guidelines to maintain the design principles regarding capacity and required energy

this guidance manual includes detailed explanations on how to implement the oecd decision on the control of transboundary movements of recoverable wastes
