while classic data management focuses on the data itself research on business processes also considers the context in which this data is generated and manipulated namely the processes users and goals that this data serves this provides the analysts a better perspective of the organizational needs centered around the data as such this research is of fundamental importance much of the success of database systems in the last decade is due to the beauty and elegance of the relational model and its declarative query languages combined with a rich spectrum of underlying evaluation and optimization techniques and efficient implementations much like the case for traditional database research elegant modeling and rich underlying technology are likely to be highly beneficiary for the business process owners and their users both can benefit from easy formulation and analysis of the processes while there have been many important advances in this research in recent years there is still much to be desired specifically there have been many works that focus on the processes behavior flow and many that focus on its data but only very few works have dealt with both the state of the art in a database approach to business process modeling and analysis the progress towards a holistic flow and data framework for these tasks and highlight the current gaps and research directions table of contents introduction modeling querying business processes other issues conclusion

this book shows that evolutionary game theory can unravel how mutual cooperation trust and credit in a group emerge in organizations and institutions some organizations and institutions such as insurance unions credit unions

and banks originated from very simple mutual aid groups members in these early stage mutual aid groups help each other making rules to promote cooperation and suppressing free riders then they come to trust not only each other but also the group they belong to itself the division of labor occurs when the society comes to have diversity and complexity in a larger group and the division of labor also requires mutual cooperation and trust among different social roles in a larger group people cannot directly interact with each other and the reputation of unknown people helps other decide who is a trustworthy person however if gossip spreads untruths about a reputation trust and cooperation are destroyed therefore how to suppress untrue gossip is also important for trust and cooperation in a larger group if trustworthiness and credibility can be established these groups are successfully sustainable some develop and evolve and then mature into larger organizations and institutions finally these organizations and institutions become what they are now therefore not only cooperation but also trust and credit are keys to understanding these organizations and institutions the evolution of cooperation a topic of research in evolutionary ecology and evolutionary game theory can be applied to understanding how to make institutions and organizations sustainable trustworthy and credible it provides us with the idea that evolutionary game theory is a good mathematical tool to analyze trust and credit this kind of research can be applied to current hot topics such as microfinance and the sustainable use of ecosystems
