typically one third of the energy used in many buildings may be consumed by electric lighting good daylighting design can reduce electricity consumption for lighting and improve standards of visual comfort health and amenity for the occupants as the only comprehensive text on the subject written in the last decade the book will be welcomed by all architects and building services engineers interested in good daylighting design the book is based on the work of 25 experts from all parts of europe who have collected evaluated and developed the material under the auspices of the european commission s solar energy and energy conservation r d programmes

one of the most fascinating unresolved problems of modern astrophysics is how the galaxies we observe today were formed the lambda cold dark matter paradigm predicts that large spiral galaxies such as the milky way formed through accretion and tidal disruption of satellite galaxies the galaxies of the local group provide the best laboratory in which to investigate these galaxy formation processes because they can be studied with sufficiently high resolution to exhume fossils of galactic evolution embedded in the spatial distribution kinematics and chemical abundances of their oldest stars based on the twentieth winter school of the canary islands institute of astrophysics this volume provides a firm grounding for graduate students and early career researchers working on local group cosmology it presents modules from eight eminent and experienced scientists at the forefront of local group research and includes overviews of observational techniques diagnostic tools and various theoretical models

this volume of important papers by one the world s leading astrophysicists provides a sweeping survey of the incisive and exciting applications of nuclear and particle physics to a wide range of problems in astrophysics and cosmology the prime focus of the book is on big bang cosmology and the role of primordial nucleosynthesis in establishing the modern consensus on the big bang this leads into the connection of cosmology to particle physics and the constraints put on various elementary particles by astrophysical arguments big bang nucleosynthesis has also led to the argument for nonbaryonic dark matter and is thus related to the major problem in physical cosmology today namely structure

formation the nuclear particle interface with astrophysics also extends to the other topics of major interest such as the age of the universe cosmic rays supernovae and solar neutrinos each of which will be discussed in some detail each section contains historical papers current papers and frequently a popular article on the subject which provides an overview of the topic this volume is testimony to the success of the integration of nuclear and particle physics with astrophysics and cosmology and to the ingenuity of the work in this area which has earned the author numerous prestigious awards the book which is accessible to beginning graduate students should be of particular interest to researchers and students in astronomy astrophysics cosmology and gravitation and also in high energy and nuclear physics

in a unique collaboration nature publishing group and institute of physics publishing have published the most extensive and comprehensive reference work in astronomy and astrophysics this unique resource covers the entire field of astronomy and astrophysics and this online version includes the full text of over 2 750 articles plus sophisticated search and retrieval functionality and links to the primary literature the encyclopaedia's authority is assured by editorial and advisory boards drawn from the world's foremost astronomers and astrophysicists this first class resource is an essential source of information for undergraduates graduate students researchers and seasoned professionals as well as for committed amateurs librarians and lay people wishing to consult the definitive astronomy and astrophysics reference work

science can do much good for mankind or can cause a catastrophe for mankind if it is handled by terrorists even aircraft can be turned into weapons of destruction as we have seen on september 11 2001 in new york city and washington dc this volume deals with science for the sake of mankind chemical physics which combines chemistry and physics and biochemical physics which combines chemistry physics and biology have been developing quite radically recently this holds true for pure and applied science as well some examples of such success are given in this book

included in this volume are papers from russian scientists scientists from the republics of the former ussr and papers from scientists in western countries

supermassive black holes are now believed to play an important role in the evolution of the universe every respectable galaxy hosts in its center a black hole that appears to regulate the growth of the galaxy itself in this book leading experts in the field review the most recent theoretical and observational results on the following topics formation and growth of the first black holes in the universe and their role in the formation and evolution of galaxies the physics of black hole accretion and the production of relativistic jets binary black hole mergers and gravitational radiation theoretical work is supplemented by the most recent exciting results from space and ground based observatories this volume is useful research and reference tool for the entire astrophysical community

these are the proceedings of the international conference formation and evolution of galaxy disks organized by the specola vaticana the vatican observatory the meeting hosted 198 participants from 26 countries the program consisted of 61 talks and about 130 poster papers in 2000 the vatican observatory organized a conference on galaxy disks and disk galaxies the proceedings of which were published in asp conference series vol 230 since that time a great amount of work has been done in this very active field october 2007 was deemed an appropriate time to hold another similar conference where outstanding senior and junior astronomers in this field could air new results the conference was focused on the formation and evolution of galaxy disks and covered the following topics 1 properties of nearby galaxy disks 2 interstellar medium star formation and chemical evolution 3 disk edges outskirts and environment 4 accretion onto disks interactions and mergers 5 secular evolution of disks and bar spiral driven evolution of galaxies 6 evolution of disk structural properties and 7 disk formation in a hierarchical universe this books is of interest for researchers in extragalactic astronomy it presents an overview of the relevant results and the progress made in the field in the last seven years publisher s website

annotation proceedings of a meeting sponsored by the vatican observatory and held at pontifical gregorian u rome in june 2000 the conference included some 230 participants from 30 countries and covered topics related to the structure formation and evolution of galaxies with disks topics include the stellar and gaseous disk of the milky way the global characteristics of galaxy disks their structure morphology and dynamics the gaseous components star formation and chemical evolution the interactions accretions mergers and starbursts the dark and luminous matter the establishment of the scaling laws and the formation and evolution of disk galaxies from theoretical and observational points of view annotation c book news inc portland or booknews com
