spie milestones are collections of seminal papers from the world literature covering important discoveries and developments in optics and photonics

w driesen this volume contains the original text of 60 papers delivered at the 32nd annual meeting of the german society for neurosurgery held in tubingen 22nd to 25th april 1981 they represent a selection from 91 papers submitted a third of which had to be excluded on critical analysis this was deemed necessary on account of costs and in order to keep the volume of a size and standard usually achieved within the last few

years three main subjects were considered 1 changes in methods of investigation and treatment of neurosurgical conditions brought about by the use of computerised axial tomography and scanning 2 papers dealing with fundamental research concerned with normal and abnormal cerebral metabolism 3 trauma to the vertebral column and spinal cord and its sequelae and 4 free communications the organisers of this meeting tried in contradistinction to previous custom to shift the emphasis away from highlighting major communications and so to remain true to their intention to allow experts in their fields to introduce their subjects and pin point problems to which subsequent speakers could then address themselves in detail in their own papers in my view this did occur in a meaningful way although not to perfection a goal always difficult to attain
