the doctrine of free trade is second only to that of free markets in undergirding ideological support for our current global economic structures and rules from david ricardo s comparative advantage principle to james meade s neoclassical or mainstream economics proof of self adjusting free trade equilibrium the free trade doctrine has had a lasting and destructive hold on neoclassical economic thinking since its inception the global free trade error provides a detailed analysis of these foundational models and counter poses these to alternative neo marxist unequal exchange models of global trade and finance in the first part of the book the three core free trade models alluded to above are

respectively demonstrated to be overdetermined inapplicable and infeasible in particular ricardo's parable is shown to support managed trade rather than free trade as ricardo and two centuries of economic texts have claimed in the second part of the book unequal exchange analyses of global trade are shown to provide logically coherent and useful insights into global trade and finance in the third and final part of the book this unequal exchange perspective is used within a general demand and cost setting to develop a set of global managed trade principles for a more equitable and sustainable world trade regime this book will be of great interest to those who study political economy history of economic thought and international trade including trade agreements and tariffs
