most laboratories conducting studies that use molecular biology techniques employ in vitro transcription and translation systems as a routine part of their day to day research the commercial availability of purified bacterial rna polymerase and the availability of robust translation systems has made in vitro systems attractive not only as an alternative to the in vivo expression of genes but also as good model systems for studying specific aspects of transcription and translation although fairly efficient eukaryotic translation systems have been established for a number of years reconstitution of transcription in vitro has proved to be more difficult recent improvements in fractionation

techniques and the cloning of proteins involved in transcription have made this a fast moving area of research considerable progress has also been made in recent years in developing in vitro systems to study transcription and translation in chloroplasts and mitochondria together with systems for the study of protein import in vitro transcription and translation protocols provides many detailed experimental procedures for prokaryotic transcription and translation systems together with protocols for many key techniques used in the analysis of eukaryotic transcription in keeping with the successful format of preceding volumes of the methods in molecular biology series step by step instructions are provided together with extensive notes that cover troubleshooting and special tips considered important

transcription and translation in health and disease provides a detailed overview of the regulators underlying transcription and translation in relation to a variety of human diseases and disorders beginning with an introduction into the current perspectives relating to these processes in human disease the book expands to focus on specific mechanisms underlying conditions such as arthritis cancer neurological disorders diabetes and cardiovascular disease this book considers rna processing and related mechanisms in eukaryotes including rna splicing rna binding proteins rna interference micrornas rna editing transcription factors rnai screening crispr activation crispr cas9 interference and post translational modifications it provides a structured and detailed overview of the various regulators underlying molecular processes and their impact on health and disease equipping readers with the necessary knowledge for further investigation in the areas of treatment and therapeutic intervention discusses the role played by transcription and translational regulation in various diseases including cancer diabetes cardiovascular disease and neurological disease considers a range of post transcriptional regulators including rna binding proteins non coding rnas epigenetic modifiers alternative splicing and telomerase binding proteins covers the topic from fundamental knowledge to the latest developments in clinical application includes a section dedicated to therapeutic applications

this book is a highly anticipated update of the previous edition it provides molecular biology laboratories with the most powerful techniques for exploiting in vitro transcription and translation systems it has been completely updated with new chapters and topics
