fourier analysis is one of the most useful and widely employed sets of tools for the engineer the scientist and the applied mathematician as such students and practitioners in these disciplines need a practical and mathematically solid introduction to its principles they need straightforward verifications of its results and formulas and they need clear indications of the limitations of those results and formulas principles of fourier analysis furnishes all this and more it provides a comprehensive overview of the mathematical theory of fourier analysis including the development of fourier series classical fourier transforms generalized fourier transforms and analysis and the discrete theory much of the author s development is strikingly different from typical presentations his approach to defining the classical fourier transform results in a much cleaner more coherent theory that leads naturally to a starting point for the generalized theory he also introduces a new generalized theory based on the use of gaussian test functions that yields an even more general yet simpler theory than usually presented principles of fourier analysis stimulates the appreciation and understanding of the fundamental concepts and serves both beginning students who have seen little or no fourier analysis as well as the more advanced students who need a deeper understanding insightful non rigorous derivations motivate much of the material and thought provoking examples illustrate what can go wrong when formulas are misused with clear engaging exposition readers develop the ability to intelligently handle the more sophisticated mathematics that fourier analysis ultimately requires

the fifth oxford conference was held on september 17th 19th 1991 at the fuji institute of training in japan the first time that the meeting has taken place in the asian area the facts that only a relatively few japanese had attended previous oxford conferences and that japan is far from other regions with possible participants made the organizers anticipate a small attendance at the meeting however contrary to our expectations 198 active members 72 foreign and 126 domestic participants submitted 146 papers from 15 countries this was far beyond our preliminary estimate and could have caused problems in providing accommodation for the participants and in programming their scientific presentations these difficulties however were

successfully overcome by using nearby hotels by telecasting presentations into a second lecture room and by displaying a substantial number of poster presentations during the whole period of the meeting the meeting had two types of sessions regular and current topics the first paper in each session represented a shon overview or introduction so as to make it easier for the audience to comprehend the problems at issue because of the large number of papers submitted carefully selected speakers mostly well known scholars made excellent presentations that were followed by lively discussions in this way the conference laid a foundation on which to base its continued scientific success
