the physics of the mind new perspectives for psychotherapists healers and seekers is aimed at psychotherapists
 psychoanalysts healers and anyone interested in the interface of physics and the mind both are interesting topics even
 more so when combined phil mollon s expertise is within psychology and over his long career he came to realise the
 importance of physics to the field in particular the branches that place mind and consciousness in the foreground of
 how we might understand the universe and our place within it there is a deep organising principle operating at all
 levels of the universe it gives rise to life and is apparent within the human mind in dreams and creativity a key lesson
 from quantum physics is that consciousness and the human mind are inextricably involved in the emergence of what
 we can observe and experience of our matter based realm in other words the behaviour of the quantum realm is
 shaped by our observation of it just as we think of space time as shaped by gravitational forces and massive bodies so
 we can conceptualise mind space the latter contains mathematical correlithms of thought emotion and memory
 whereby what is similar attracts more of the same in a manner analogous to gravity these have effects within the mind
 and in the wider life field for example severe and repeated childhood trauma creates the equivalent of black holes in
 the mind space metaphysics posits that our matter based universe is subtended within an infinite unified field of
 intelligence and creativity we are contained within a vast mind the principle is that unlimited guidance and knowledge

is available via meditation and intuition requiring only that we seek it is never thrust upon us this is a book filled with extraordinary ideas to dip into wherever curiosity and intuition lead it is the author s fervent wish that what is within will stimulate thought and awareness and spark continuing creative concepts concerning our place in this cosmos

it s hard to conceive of a topic of more broad and personal interest than the study of the mind in addition to its traditional investigation by the disciplines of psychology psychiatry and neuroscience the mind has also been a focus of study in the fields of philosophy economics anthropology linguistics computer science molecular biology education and literature in all these approaches there is an almost universal fascination with how the mind works and how it affects our lives and our behavior studies of the mind and brain have crossed many exciting thresholds in recent years and the study of mind now represents a thoroughly cross disciplinary effort researchers from a wide range of disciplines seek answers to such questions as what is mind how does it operate what is consciousness this encyclopedia brings together scholars from the entire range of mind related academic disciplines from across the arts and humanities social sciences life sciences and computer science and engineering to explore the multidimensional nature of the human mind
