money travels the modern world in disguise it looks like a convention of human exchange a commodity like gold or a medium like language but its history reveals that money is a very different matter it is an institution engineered by political communities to mark and mobilize resources as societies change the way they create money they change the market itself along with the rules that structure it the politics and ideas that shape it and the benefits that flow from it one particularly dramatic transformation in money s design brought capitalism to england for centuries the english government monopolized money s creation the crown sold people coin for a fee in exchange for silver and gold commodity money was a fragile and difficult medium the first half of the book considers the kinds of exchange and credit it invited as well as the politics it engendered

capitalism arrived when the english reinvented money at the end of the 17th century when it established the bank of england the government shared its monopoly over money creation for the first time with private investors institutionalizing their self interest as the pump that would produce the money supply the second half of the book considers the monetary revolution that brought unprecedented possibilities and problems the invention of circulating public debt the breakdown of commodity money the rise of commercial bank currency and the coalescence of ideological commitments that came to be identified with the gold standard all contributed to the abundant and unstable medium that is modern money all flowed as well from a collision between the individual incentives and public claims at the heart of the system the drama had constitutional dimension money as its history reveals is a mode of governance in a material world that character undermines claims in economics about money s neutrality the monetary design innovated in england would later spread producing the global architecture of modern money

in the early middle ages the conversion of the early english kingdoms acted as a catalyst for significant social and cultural change one of the most visible of these changes was the introduction of a new type of household the monastic household these reproduced through education and training rather than biological means their inhabitants practised celibacy as a lifelong state rather than as a stage in the life course because monastic households depended on secular households to produce the next generation of recruits previous studies have tended to view them as more mutable than their secular counterparts which are implicitly regarded as natural and ahistorical katharine sykes charts some of the significant changes to the structure of households between the seventh to eleventh centuries as ideas of spiritual non biological reproduction first fostered in monastic households were adopted in royal households in the tenth and eleventh centuries and as ideas about kinship that were generated in secular households such as the relationship between genealogy and inheritance were picked up and applied by their monastic counterparts in place of binary divisions between secular and monastic biological and spiritual real and imagined sykes demonstrates that different forms of kinship and reproduction in this period were intimately linked

this volume records and illustrates the minting of silver pennies in winchester between the reigns of alfred the great and henry iii five and a half thousand survive in museums and collections all over the world sought out and photographed some 3200 coins in 6400 images detailing both sides they have been minutely catalogued for this volume

before the second world war only about 20 of the population went to secondary

school and barely 2 to university today everyone goes to secondary school and half of all young people go to university how did we get here from there the crisis of the meritocracy answers this question not by looking to politicians and educational reforms but to the revolution in attitudes and expectations amongst the post war british public the rights guaranteed by the welfare state the hope of a better life for one s children widespread upward mobility from manual to non manual occupations confidence in the importance of education in a learning society and a knowledge economy as a result of these transformations meritocracy the idea that a few should be selected to succeed has been challenged by democracy and its wider understandings of equal opportunity across the life course at a time when doubts have arisen about whether we need so many students and amidst calls for a return to grammar school selection at 11 the tension between meritocracy and democracy remains vital to understanding why our grandparents our parents ourselves and our children have sought and got more and more education and to what end
