the general purpose with which this book has been written is sufficiently indicated by its title i have selected a number of the classical experiments of experimental psychology and have tried to present them in such a way that their performance shall have a real disciplinary value for the undergraduate student within this general purpose my aim has been two fold i have sought to show in the first place that psychology is above the laboratory that we employ our instruments of precision not for their own sake but solely because they help us to a refined and more accurate introspection and secondly just as in my outline of psychology and primer of psychology i gave the results of experimentation a prominent place in the psychological system so here i have treated the selected experiments not as separate exercises but as points of departure for systematic discussion psycinfo database record c 2005 apa all rights reserved

computer aided design has come of age in the magnetic devices industry from its early beginnings in the 1960s when the precision needs of the experimental physics community first created a need for computational aids to magnet design cad software has grown to occupy an important spot in the industrial designer s tool kit numerous commercial cad systems are now available for magnetics work and many more software packages are used

in house by large industrial firms while their capabilities vary all these software systems share a very substantial common core of both methodology and objectives the present need particularly in medium sized and nonspecialist firms is for an understanding of how to make effective use of these new and immensely powerful tools what approximations are inherent in the methods what quantities can be calculated and how to relate the computed results to the needs of the designer these new analysis techniques profoundly affect the designer's approach to problems since the analytic tools available exert a strong influence on the conceptual models people build and these in turn dictate the manner in which they formulate problems the impact of cad is just beginning to be felt industrially and the authors believe this is an early but not too early time to collect together some of the experience which has now accumulated among industrial and research users of magnetics analysis systems

this text is designed for those who wish to study mathematics beyond linear algebra but are unready for abstract material rather than a theorem proof corollary exposition it stresses geometry intuition and dynamical systems 1996 edition
