understood just as any other kind of reasoning in order to achieve our goal we will provide a common logical basis and semantic representation in which different kinds of non monotonic reasoning can be interpreted and studied the suggested framework will subsume basic forms of nonmonotonic inference including not only the usual skeptical one but also various forms of credulous brave and defeasible reasoning as well as some new kinds such as contraction inference relations that express relative independence of pieces of data in addition the same framework will serve as a basis for a general theory of belief change which among other things will allow us to unify the main approaches to belief change existing in the literature as well as to provide a constructive view of the semantic representation used this book is a monograph rather than a textbook with all its advantages mainly for the author and shortcomings for the reader
