frank arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure he argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist

in this book lawrence sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics the overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time without neglecting the most subtle

philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training in physics mathematics or philosophy the arguments are set forth step by step beginning from first principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories

this book examines issues related to the concepts of space time and causality in the context of modern physics and ancient indian traditions it looks at the similarity and convergence of these concepts of modern physics with those discussed in ancient indian wisdom the volume brings the methodologies of empiricism and introspection together to highlight the synergy between these two strands it discusses wide ranging themes including the quantum vacuum as ultimate reality quantum entanglement and metaphysics of relations identity and individuality and dark energy and anti matter as discussed in physics and in indian philosophical schools like vedanta yoga buddhist kashmiri shaivism and jaina philosophy first of its kind this book will be an essential read for scholars and researches of philosophy indian philosophy philosophy of science theoretical physics and social science

the study of mathematical cognition and the ways in which the ideas of space time and number are encoded in brain circuitry has become a fundamental issue for neuroscience how such encoding differs across cultures and educational level is of further interest in education and neuropsychology this rapidly expanding field of research is overdue for an interdisciplinary volume such as this which deals with the neurological and psychological foundations of human numeric capacity a uniquely integrative work this volume provides a much needed compilation of primary source material to researchers from basic neuroscience psychology developmental science neuroimaging neuropsychology and theoretical biology the first comprehensive and authoritative volume dealing with neurological and psychological foundations of mathematical cognition uniquely integrative volume at the frontier of a rapidly expanding interdisciplinary field features outstanding and truly international scholarship with chapters written by leading experts in a variety of fields

this book gives a rigorous discussion of the local effects of curvature on the behaviour of waves in the course of this discussion many techniques are developed which are also needed for a study of more general problems in which the gravitational field itself plays a dynamical role

general relativity and quantum field theory the glaring theoretical problem for 21st century physics is how to unite the two great theories of 20th century physics i have done just this by considering the problem from a fresh new perspective the result is a theory that is mathematically simple and elegant based on one postulate i am able to derive a very simple

mathematical formulation using this formulation i find results for the schwarzschild radius of a black hole the bounce of a neutron in earth s gravity and the entropy of a black hole i also have discovered that space time is in fact a conserved quantity
