a unique approach to the history of science using do it yourself experiments along with brief historical profiles to demonstrate how the ancient alchemists stumbled upon the science of chemistry be the alchemist explore the legend of alchemy with the science of chemistry enjoy over twenty hands on demonstrations of alchemical reactions in this exploration of the ancient art of alchemy three veteran chemists show that the alchemists quest involved real science and they recount fascinating stories of the sages who performed these strange experiments why waste more words on this weird deviation in the evolution of chemistry as the authors show the writings of medieval alchemists may seem like the ravings of brain addled fools but there is more to the story than that recent scholarship has shown that some seemingly nonsensical mysticism is in fact decipherable code and western european alchemists functioned from a firmer theoretical foundation than previously thought they had a guiding principle based on experience separate and purify materials by fire and reconstitute them into products including of course gold and the universal elixir the philosophers stone their efforts were not in vain by trial by error by design and by persistence the alchemists discovered acids alkalis alcohols salts and exquisite powerful and vibrant reactions which can be reproduced using common products minerals metals and salts so gather your vats and stoke your fires get ready to make burning waters peacocks tails philosophers stone and of course gold

beginning in china in the search for the secret of immortality and appearing independently in egypt as an attempt to produce gold through the arts of smelting and alloying metals alchemy received a great boost in europe from studies by islamic and jewish alchemists translated into latin and then combined with what was known of greek natural science these accounts provoked an outburst of attempts to manipulate matter and to change it into transformative substances known as the philosopher s stone or the elixir of life alchemy s heyday in europe was the sixteenth and seventeenth centuries demonstrations of the art were performed in royal courts and specimens of the gold so transmuted can be seen in various museums today during the nineteenth century attempts were made to amalgamate alchemy with the religious and occult philosophies then growing in popularity and in the twentieth century psychologists principally carl jung perceived in alchemy a powerful vehicle for aspects of their theories about human nature

chapter i the explanation of material changes given by the greek thinkers for thousands of years before men had any accurate and exact knowledge of the changes of material things they had thought about these changes regarded them as revelations of spiritual truths built on them theories of things in heaven and earth and a good many things in neither and used them in manufactures arts and handicrafts especially in one

very curious manufacture wherein not the thousandth fragment of a grain of the finished article was ever produced the accurate and systematic study of the changes which material things undergo is called chemistry we may perhaps describe alchemy as the superficial and what may be called subjective examination of these changes and the speculative systems and imaginary arts and manufactures founded on that examination we are assured by many old writers that adam was the first alchemist and we are told by one of the initiated that adam was created on the sixth day being the 15th of march of the first year of the world certainly alchemy had a long life for chemistry did not begin until about the middle of the 18th century no branch of science has had so long a period of incubation as chemistry there must be some extraordinary difficulty in the way of disentangling the steps of those changes wherein substances of one kind are produced from substances totally unlike them to inquire how those of acute intellects and much learning regarded such occurrences in the times when man's outlook on the world was very different from what it is now ought to be interesting and the results of that inquiry must surely be instructive if the reader turns to a modern book on chemistry for instance the story of the chemical elements in this series he will find at first superficial descriptions of special instances of those occurrences which are the subject of the chemist's study he will learn that only certain parts of such events are dealt with in chemistry more accurate descriptions will then be given of changes which occur in nature or can be produced by altering the ordinary conditions and the reader will be taught to see certain points of likeness between these changes he will be shown how to disentangle chemical occurrences to find their similarities and differences and gradually he will feel his way to general statements which are more or less rigorous and accurate expressions of what holds good in a large number of chemical processes finally he will discover that some generalisations have been made which are exact and completely accurate descriptions applicable to every case of chemical change but if we turn to the writings of the alchemists we are in a different world there is nothing even remotely resembling what one finds in a modern book on chemistry here are a few quotations from alchemical writings it is necessary to deprive matter of its qualities in order to draw out its soul copper is like a man it has a soul and a body the soul is the most subtile part that is to say the tinctorial spirit the body is the ponderable material terrestrial thing endowed with a shadow after a series of suitable treatments copper becomes without shadow and better than gold the elements grow and are transmuted because it is their qualities not their substances which are contrary stephanus of alexandria about 620 a d
