this book presents state of the art research on forming processes and formed metal product development aided by the finite element method fem using extensive and informative illustrations tables and photographs it systematically presents real life case studies and established findings regarding various forming processes and methods aided by fem simulation and addresses various issues related to metal formed part design process determination die design and die service life analysis and prolongation as well as product quality assurance and improvement metal forming has been widely used in many industries this traditional manufacturing process however has long been linked to many years of apprenticeship and skilled craftsmanship and its conventional design and development paradigm appeared to involve more know how and trial and error than in depth scientific calculation analysis and simulation the design paradigm for forming processes and metal

formed product development thus cannot meet the current demands for short development lead times low production costs and high product quality with the advent of numerical simulation technologies the design and development of forming processes and metal formed products are carried out with the aid of fem simulation allowing all the potential design spaces to be identified and evaluated and the best design to ultimately be determined and implemented such a design and development paradigm aims at ensuring designing right the first time and reducing the need for trial and error in the workshop this book provides postgraduates manufacturing engineers and professionals in this field with an in depth understanding of the design process and sufficient knowledge to support metal formed part design forming process determination tooling design and product quality assurance and control via fem simulation p
