meeting the targets of the un sustainable development goals sdgs  
requires contributions by scientists focusing on understanding  
monitoring protecting managing and restoring the natural  
environment including geoscientists this book presents the first  
detailed discussion on the role of the geological sciences  
geosciences community in the implementation of the sdgs unlike

traditional geosciences textbooks it is structured according to development priorities framed in the context of the 17 sdgs written by international experts from diverse range of geosciences development disciplines it explores themes linked to both science and the professional practice of science e g ethics equity conduct and partnerships the book is intended for graduate and senior undergraduate students in the earth sciences as well as practicing geologists and experts from other sectors involved in sustainability initiatives

in recent years the concept of the resource nexus has been both hotly debated and widely adopted in research and policy circles it is a powerful new way to understand and better govern the myriad complex relationships between multiple resources actors and their security concerns particular attention has been paid to water energy and food interactions but land and materials emerge as critical too this comprehensive handbook presents a detailed review of current knowledge about resource nexus related frameworks methods and governance including a broad set of interdisciplinary perspectives written by an international group of scholars and practitioners the volume focuses on rigorous research including tools methods and modelling approaches to analyse resource use patterns across societies and scales from a nexus perspective it also provides numerous examples from political economy to demonstrate how resource nexus frameworks can illuminate issues such as land grabs mining renewable energy and the growing importance of economies such as china as well as to propose lessons and outlooks for sound governance the volume seeks to serve as an essential reference text source book and state of the art science based assessment of this increasingly important topic the resource nexus and its utility in efforts to enhance sustainability of many kinds and implement the united nations sustainable development goals in an era of environmental and geopolitical change

this handbook brings together a collection of seminal research on the sustainable development goals sdgs and investigates the effectiveness of the 17 goals for achieving transformative change toward sustainable development as a collection of inter and transdisciplinary research from around the world this volume explores the applications implications and best practices of the goals at thematic regional and national levels providing specific examples from a diverse range of places such as australia brazil china drc india italy the sahel region of africa and the usa among others the book serves as a mid term evaluation of the sdgs bringing to the fore comprehensive experiences and evidence related to the sdgs whilst highlighting the interlinkages between the different goals the handbook is divided into two parts part i brings together groundbreaking research to define identify and present conceptual frameworks for a sustainable future whilst part ii focuses on the policies practices and implementation of the sdgs the chapters identify key aspects missing from the 2030 agenda such as global power imbalances cultural diversity indigenous rights and unsustainable levels of consumption they also critically evaluate the overall delivery and effectiveness of the sdgs whilst outlining potential future directions for the post sdg 2030 agenda this handbook is aimed at a diverse and global audience of academics and students of economics business studies political science and development studies it will also serve as a valuable reference for leaders in the industry the public sector civil society and international policymakers keen to gain a better understanding of the sdgs chapter 1 9 11 and 30 of this book is freely available as a downloadable open access pdf at taylorfrancis com under a creative commons attribution non

the natural mission of computational science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems for this reason computational science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity in all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms as a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to computational science and its applications interoperable and ubiquitous numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 international conference on computational science and its applications iccsa 2004 held in Assisi Italy May 14-17 2004

this is the first of a three volume set that constitutes the refereed proceedings of the 4th international conference on universal access in human computer interaction uahci 2007 held in Beijing China it covers designing for universal access universal access methods techniques and tools understanding motor diversity perceptual and cognitive abilities as well as understanding age diversity

this book discusses a spectrum of approaches to designing the food energy water nexus at different spatial urban scales the book offers a framework for working on the food energy water nexus in a design led context and integrates the design of urban neighbourhoods and regions with methodologies how to simultaneously engage residents and stakeholders and evaluating the propositions in a few print measuring the environmental impact of the different designs the examples are derived from on the ground practices in Sydney Tokyo Detroit Amsterdam and Belfast

in spite of its high cost and technical importance plasma equipment is still largely designed empirically with little help from computer simulation plasma process control is rudimentary optimization of plasma reactor operation including adjustments to deal with increasingly stringent controls on plant emissions is performed predominantly by trial and error there is now a strong and growing economic incentive to improve on the traditional methods of plasma reactor and process design optimization and control an obvious strategy for both chip manufacturers and plasma equipment suppliers is to employ large scale modeling and simulation the major roadblock to further development of this promising strategy is the lack of a database for the many physical and chemical processes that occur in the plasma the data that are currently available are often scattered throughout the scientific literature and assessments of their reliability are usually unavailable database needs for modeling and simulation of plasma processing identifies strategies to add data to the existing database to improve access to the database and to assess the reliability of the available data in addition to identifying the most important needs this report assesses the experimental and theoretical computational techniques that can be used or must be

developed in order to begin to satisfy these needs

over 200 chapters in six volumes cover the whole gamut of plastic reconstructive and aesthetic surgeries a comprehensive and illustrated work from the land of sushruta for students teachers and practicing surgeons in this volume principles and advances in plastic surgery a very wide spectrum of topics right from the history of plastic surgery to current and raging subjects like lasers composite tissue allotransplantation simulation robotics telemedicine and information technology in plastic surgery clinical photography human factors and skills in plastic surgery doctor patient relationship and legal issues have been discussed the six volumes seek to incorporate in one work issues relevant to the developing world as well as insights from national and international plastic surgery practices which highlight newer management techniques along with traditional methods this makes these volumes a must have resource for students and practitioners of plastic surgery across the globe key features the book is broadly divided into five sections general face hair restoration body contouring and breast explains techniques of hair restoration surgery this is a unique topic and is not covered in any of the similar published titles covers all the aspects of aesthetic plastic surgery including nonsurgical management the chapter on regenerative medicine gives a futuristic literature section on face covers topics related to ageing surgical and nonsurgical rejuvenation techniques
