using variants of a modified version of dornbusch's model of price level and exchange rate dynamics it is demonstrated that satisfaction of the formal condition for existence of a unique non explosive solution of a linear rational expectations model with forward and backward looking dynamic processes equality of the number of stable roots with the number of independent backward looking processes does not guarantee the economic sensibility of this

solution even if one accepts the usual arguments for excluding speculative babbles from the solutions of such models moreover satisfaction of the formal condition for existence of an infinity of non explosive solutions for such rational expectations models more stable roots than independent backward looking processes does not assure that any of these solutions is economically sensible

abel bernanke croushore kneebone is a well respected intermediate macroeconomics text that takes a balanced keynesian and classical approach praised in its previous editions for giving students the tools they need to think critically and coherently about macroeconomics macroeconomics seventh canadian edition has been revised to include new material to keep the text modern and up to date while building on the strengths that underline the book s lasting appeal

uncertainty varies strongly over time rising by 50 to 100 in recessions and by up to 200 after major economic and political shocks this paper shows that higher uncertainty reduces the responsiveness of  $r_d$  to changes in business conditions a caution effect making it more persistent over time thus uncertainty will play a critical role in shaping the dynamics of  $r_d$  through the business cycle and its response to technology policy i also show that if firms are increasing their level of  $r_d$  then the effect of uncertainty will be negative while if firms are reducing  $r_d$  then the effect of uncertainty will be positive
