from inside the book since 1980 the economy has been growing and productivity has been growing but trickle down values that we the american people promote pursuant to the republican party's conservative ideology have rigged the economy to continuously upwardly redistribute those revenues attributable to our increased productivity yielding a productivity wage disconnect resulting in increased concentration of income and wealth at the top in corporations and among older americans beneficiaries of income from social security pensions and investments and continuing income due to delaying retirement and the lowest percentage of gdp attributable to wages and highest attributable to profits since world war ii but trickle down has not only distorted our economic thought it has also distorted our political thought our sociology and our concept of the rule of law the result has been that the trickle down policies promoted by the republican party are undermining our economy democracy institutions and health for further discussion contact author at johnjseip gmail com

this paper investigates the efficiency of the japanese distribution system measured by the distribution margin most of the discussions on the japanese distribution system have so far relied on institutional descriptions and anecdotal evidence failing to substantiate the case the present paper will show that the japanese and u s distribution sectors are about the same in terms of value added and distribution margins therefore it is not true that the distribution sector adds up unnecessary distribution costs or earns monopolistic operating profits this paper will not address a question whether the distribution system is acting as a non tariff barrier thus even if the distribution sector in japan is judged to be efficient it leaves open a possibility that the distribution system works as a barrier to potential new entrants from both home and foreign manufacturers

international transmission of fiscal policy among open interdependent economies under free international capital mobility with only lump sum taxes and transfers international transmission involves only pecuniary externalities barring dynamic inefficiency only distributional issues intergenerational and international are involved with age specific taxes and transfers the ability to run deficits and issue debt does not enhance the choice set of the governments source based taxes on the rentals from capital and residence based taxes on all property income are also studied

small transaction costs and uncertainty imply that optimal cross currency interest rate speculation is marked by a first order hysteresis band consequently uncovered interest parity does not hold and market efficiency tests based on it are misspecified indeed measured prediction errors are a combination of true prediction errors and a wedge that consists of the option value of being in foreign currency and either plus or minus the transaction cost due to the nature of this wedge we should expect measured prediction errors to be serially correlated correlated with the current forward rate and perhaps have a non zero mean if the interest differential itself is serially correlated the existence of the wedge helps account both for the failure of market efficiency tests and the difficulties in finding an empirically successful model of the risk premium

in late 1979 turkey stood in the throes of a foreign exchange crisis with widespread shortages negative growth and inflation into triple digits a decade later turkey has a comfortable balance of payments situation and sits atop considerable foreign exchange reserves the economy has achieved a remarkable transformation from an inward oriented outlook to an outward oriented one yet after some success in the early 1980s inflation remains unconquered and the public sector budget is out of control this paper provides an interpretation of the turkish experience in the 1980s it is argued that foreign capital inflows in the early 1980s

cushioned the fiscal squeeze and allowed a relatively painless reduction in inflation alongside a process of export oriented growth in the best of all possible worlds the outward oriented reforms would have taken sufficient root by the mid 1980s to allow the public sector to undertake the delayed retrenchment as the inflows came to an end at no great cost to output instead policy followed a mix of liberalization with patronage politics detrimental to monetary discipline financial liberalization reduced demand for base money at the same time that fiscal balances came under increasing strain due to the external transfer inflation was rekindled under the dual influence of fiscal deficits and a shrinking base for the inflation tax
