this book provides a detailed study of nonlinear partial differential equations satisfying  
 certain nonstandard growth conditions which simultaneously extend polynomial  
 inhomogeneous and fully anisotropic growth the common property of the many different  
 kinds of equations considered is that the growth conditions of the highest order operators  
 lead to a formulation of the equations in musielak orlicz spaces this high level of generality  
 understood as full anisotropy and inhomogeneity requires new proof concepts and a  
 generalization of the formalism calling for an extended functional analytic framework this  
 theory is established in the first part of the book which serves as an introduction to the  
 subject but is also an important ingredient of the whole story the second part uses these  
 theoretical tools for various types of pdes including abstract and parabolic equations but  
 also pdes arising from fluid and solid mechanics for connoisseurs there is a short chapter  
 on homogenization of elliptic pdes the book will be of interest to researchers working in  
 pdes and in functional analysis
