expertise in every classroom should be the norm not the exception we have all had that magical teacher who we remember

years later we remember how this teacher made us believe we could do anything the mythical experts exist and have much to teach us in our quest to build a powerhouse education system unfortunately forty years of research and over 25 years of reform models have led to few changes in the teaching profession and in the overall outcomes in education both national and international research demonstrates expertise in teaching can be clearly defined and developed countries around the world have successfully revamped their systems to develop and support expert teachers while we grapple with failed value added models and are beginning to understand linkage to single achievement test scores leaves out the impact teachers have upon the students peers and the culture as a whole we have erected barriers in the form of scripted curricula overuse of testing and failed professional development models yet some teachers overcome all the barriers and develop expertise these teachers find avenues of development either in small pockets of peers or individually while other countries are developing experts in mass numbers the united states is creating such teachers in very small pockets examining the thinking processes and practice of these teachers offers a glimpse into what we should desire in every classroom in every school this book bridges both research and practical elements we believe expert teachers desire both we often discuss the disconnect between research and practice this book is intended to bridge both academic expectations and practitioner expectations we believe the academic community must make research accessible and user friendly to practitioners and practitioners should be at the forefront of research discussions we must blend the ivory towers of academia with the daily work in our schools if we are to create world class systems expert teachers are both academic researchers and critical practitioners reform movements are showing little progress we need to redefine the profession

after 40 years of cold war nato found itself intervening in bosnia herzegovina kosovo and afghanistan where the ability to communicate with local people was essential to the success of the missions this book explains how the alliance responded to

this challenge so as to ensure that the missions did not fail through lack of understanding

343 whilst this may be so it is also true that this in itself is not sufficient to deter mine it completely in fact the extent of the dead air region and the behaviour of the shear layer are also of prime importance and in short a unified treatment comprising external flow boundary layer shear layer and dead air region becomes necessary to complete the investigation this would take us outside the scope of the present article and for the substantial progress that has been made towards such a treatment the reader is referred to a paper by holder and gadd 1 and its comprehensive list of references v heat transfer in incompressible boundary layers 25 introduction the term fluid includes gases and liquids both gases and liquids are to some extent compressible but in many problems of fluid flow the density changes occurring are small when they are small enough to be

negligible we can regard the flow as incompressible in chap iv we have established the equations for compressible flow of gases and these can of course be used to determine when density changes in a gas flow are in fact negligible broadly speaking this will be so when the temperature changes as determined by the energy equation are small enough
