good agroecological practices are indispensable for the development of sustainable  
 agriculture in this book principles diversity and applications of agroecological  
 practices for a range of systems are presented transforming scientific research and  
 participatory knowledge of production into practical application it illustrates a  
 broad range of research and teaching being used within the farming community  
 to demonstrate best practice and current state of play within the field  
 agroecological methods used in crop farming grass based livestock farming fish  
 production and other complex farming systems are discussed conclusions are  
 drawn from studies to provide an outlook on future trends of agroecological  
 practices and on policies supporting implementation due to emphasis on real life  
 application it is relevant not only to students of the agricultural sciences and public  
 policy but also to researchers stakeholders and policy makers involved in the  
 development of sustainable agriculture

present day heterogeneous catalysis is rapidly being transformed from a technical  
 art into a science based technology a major contribution to this important change  
 is the advance of surface spectroscopic techniques able to characterize the  
 complex surfaces of the heterogeneous catalytic system the advanced study  
 institute on which the current proceedings is based has as its primary aim the  
 bringing together of a variety of lecturers outstanding in those fields of experience  
 to enable a broad coverage of different relevant approaches not only catalyst

characterization but also catalytic reactivity had to be covered in order to relate catalyst properties with catalyst performance since modern catalysis relates catalytic performance to microscopic molecular catalyst features theoretical electronic aspects also had to be included the advanced study institute had a unique feature in that it brought together physicists catalytic chemists and chemical engineers whom rarely directly interact from physics especially new experimental possibilities of beams were emphasized at present it is possible to obtain very detailed information on model catalysts whilst the applications to practical catalysts are gaining rapidly in sophistication apart from the plenary lectures the institute included hot topics to highlight special developments and offered participants the opportunity to present contributed papers either orally or as a poster these contributions formed an integral part of the summer school and significantly enhanced the interaction between participants inclusion of the hot topics and contributed papers in these proceedings give them an added topical value
