this book introduces the concept of policy decision emergence and its dynamics at the sub systemic level of the decision process this level constitutes the breeding ground of the emergence of policy decisions but remains unexplored due to the absence of adequate tools it is a nonlinear complex system made of several entities that interact dynamically the behavior of such a system cannot be understood with linear and

deterministic methods the book presents an innovative multidisciplinary approach that results in the development of a policy decision emergence simulation model. This computational model is a multi-level fuzzy inference system that allows the identification of the decision emergence levers. This development represents a major advancement in the field of public policy decision studies. It paves the way for decision emergence modeling and simulation by bridging complex systems theory, multiple streams theory, and fuzzy logic theory.

For courses on decision modeling through the use of spreadsheets, the perfect balance between decision modeling and spreadsheet use, it's important that textbooks support decision modeling courses by combining student's ability to logically model and analyse diverse decision making scenarios with software based solution procedures. Balakrishnan offers the perfect balance of the decision modeling process and the use of spreadsheets to set up and solve decision models.
