As Europe moves toward an integrated academic system European economics is changing. This book discusses that change along with the changes that are happening simultaneously within the economics profession. The authors argue that modern economics can no longer usefully be described as neoclassical but is much better described as complexity economics. The complexity approach embraces rather than assumes away the complexities of social interaction. The authors also argue that despite all the problems with previous European academic structures those structures allowed for more diversity than exists in US universities and thus were often ahead of US universities in exploring new cutting edge approaches. The authors further argue that by trying to judge themselves by US centric measures and to copy US universities the European economics profession is undermining some of the strengths of the older system strengths on which it should be building. While the authors agree that European economics needs to go through major changes in the coming decade they argue that by building on Europe's strengths rather than trying to follow a US example Europe will be more likely to become the global leader in economics in the coming decades rather than a second rate copy of the US. The book begins with two chapters spelling out the authors view of the changes in economics and European economics. This is followed by 11 interviews with a diverse set of innovative European economists from a range of European countries. In the interviews these European economists reflect on the ongoing changes in economics generally and in European economics specifically. These interviews demonstrate how the economics profession is moving away from traditional neoclassical economics into a dynamic set of new methods and approaches incorporating work in behavioral economics, experimental economics, evolutionary game theory and ecological approaches, complexity and nonlinear dynamics, methodological analysis and agent based modelling that the authors classify as complexity economics. This fascinating and easy to read book will prove a stimulating and thought provoking read for those with an interest in economics, European education and the nature of academic disciplines generally.

the book is fascinating to read not only by someone like me who is not really an economist but has been close to the field and has been teaching students of economics for a long time but mainly by policymakers both in the field of higher education and in other fields like business where the larger aspects of societal changes are more and more apparent the book is even more worth reading to an audience of economics professors researchers students and particularly policymakers who are waiting for input from economic higher education mariana nicolae journal of philosophical economics in this captivating volume david colander scrutinizes economics in europe which is currently undergoing a radical process of convergence standardization and metrication while he acknowledges that the usa is the world leader in terms of journal publications in economics he also suggests that the scholarly breadth and practical orientation of much economics research in europe is worth preserving and enhancing no one who wishes to make economics more relevant should ignore colander s painstaking study geoffrey m hodgson university of hertfordshire uk david colander s highly original and thought provoking book considers ongoing changes in graduate european economics education following up on his earlier classic studies of us graduate economic education he studies the economist production function in which universities take student raw material and transform it into economists in doing so he provides insight into economists and economics he argues that until recently europe had a different economist production function than did the us thus european economists were different from their us counterparts however this is now changing and colander suggests that the changes are not necessarily for the best specifically he suggests that in their attempt to catch up with us programs european economics is undermining some of their strengths strengths that could allow them to leapfrog us economics in the future and be the center of 21st century economics student views on the ongoing changes and ensuing difficulties are reported via surveys of and interviews with students in global european graduate programs the conclusion draws broad policy implications from the study and suggests a radically different market approach to funding economic research that colander argues will help avoid the pitfalls into which european economics is now falling this unique and path breaking book will prove essential reading for economists as well as academics students and researchers with a special interest in economics education
