this thesis demonstrates that an ultralow temperature refrigeration technique called demagnetisation refrigeration can be miniaturised and incorporated onto millimeter sized chips to cool nanoelectronic circuits devices and materials until recently the lowest temperature ever reached in such systems was around 4 millikelvin here a temperature of 1.2 mK is reported in a nanoelectronic device the thesis introduces the idea that on chip demagnetization refrigeration can be used to cool a wide variety of nanostructures and devices to microkelvin temperatures this brings the exciting possibility of

discovering new physics such as exotic electronic phases in an unexplored regime and the potential to improve the performance of existing applications including solid state quantum technologies since the first demonstration of on chip demagnetization refrigeration described here the technique has been taken up by other research groups around the world the lowest on chip temperature is currently 0.4 mK work is now underway to adapt the technique to cool other materials and devices ultimately leading to a platform to study nanoscale materials devices and circuits at microkelvin temperatures

access to dissertations and theses is becoming increasingly easier as a result of digitalization projects such as umi's current research which at the present time provides full text access to dissertations published after 1996 however access to retrospective titles continues to prove difficult this bibliography addresses some of the limitations of dissertation abstracts especially in uncovering works below the doctoral level and those produced in Canada's French language universities while Canadian research is accessible by title and keyword through the National Library of Canada's checklists covering the period from 1821 onwards there are few existing publications that provide abstracts existing annotated bibliographies in the field of fine arts in Canada merely cover dissertations written prior to 1981 this book identifies 1765 theses or dissertations dealing with Canadian art or built architecture in Canada excluding studio projects and works on landscape architecture chronologically these works cover a time span from 1924 to 1999 the bibliography is divided into 25 sections 13 dealing with art and 12 dealing with architecture works are listed in the category considered most descriptive of content with cross references to other relevant sections author institution and detailed subject indexes are provided along with order numbers where available all abstracts are in English although approximately 40 percent of the works included were written in French with a few in other languages a specialized but needed resource reference work for librarians art and architecture historians and students of Canadian art and architecture
