electric vehicle integration in a smart microgrid environment
the growing demand for energy in today s world especially in the middle east and southeast asia has been met with massive exploitation of fossil fuels resulting in an increase in environmental pollutants
in order to mitigate the issues arising from

conventional internal combustion engine powered vehicles there has been a considerable acceleration in the adoption of electric vehicles. Research has shown that the impact of fossil fuel use in transportation and surging demand in power owing to the growing EV charging infrastructure can potentially be minimized by smart microgrids. As EVs find wider acceptance with major advancements in high efficiency drivetrain and vehicle design, it has become clear that there is a need for a system level understanding of energy storage and management in a microgrid environment. Practical issues such as fleet management, coordinated operation, repurposing of batteries, and environmental impact of recycling and disposal need to be carefully studied in the context of an ageing grid infrastructure. This book explores such a perspective with contributions from leading experts on planning, analysis, optimization, and management of electrified transportation and the transportation infrastructure. The primary purpose of this book is to capture state of the art development in smart microgrid management with EV integration and their applications. It also aims to identify potential research directions and technologies that will facilitate insight generation in various domains from smart homes to smart cities and within industry, business, and consumer applications. We expect the book to serve as a reference for a larger audience including power system architects, practitioners, developers, new researchers, and graduate level students, especially for emerging clean energy and transportation electrification sectors in the middle east and southeast asia.

When a company initiates export development and internationalisation, it is essential to follow a systematic strategy formulation and decision making process. Export planning 2nd edition provides a methodology to plan and achieve globalisation. This process of export planning consists of four phases: export policy, export audit, export plan, and export roll out. Export planning describes these 4 phases and provides a 10 step guide for the construction of an international marketing plan. Export planning will enable readers to: 1 systematically select and plan entries into new international markets, 2 enhance the chances of success through an integrated review of analysis and strategy by means of marketing, logistics, organization, and finance, 3 assemble a sound line of reasoning from strategy to implementation. Export planning is a practical book; it describes export and international marketing at a strategic, tactical, and operational level and combines theoretic models with relevant practical experience. New to this 2nd edition is an additional chapter on the implementation of the export transaction. This book is intended for bachelor and graduate students at business schools and universities. This book is also useful for anyone who wants to know more about export planning, international marketing, and international market development.
